

Subject card

Subject name and code	Knowledge of the habitat, PG_00103896						
Field of study	Natural Resources Conservation						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2025/2026		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Optional subject group		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			2.0		
Learning profile	academic	Assessment form					
Conducting unit	Laboratory of Plant Interactions -> Department of Plant Taxonomy and Nature Conservation -> Faculty of Biology -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Julita Minasiewicz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		0.0		0.0	15
Subject objectives	1. to learn about the formation and functioning of terrestrial habitats (biotopes), their transformations, spatial differentiation and relationships with different types of biocenoses. 2. Practical learning of field methods of studying soils (habitats) and their identification in the field.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OZPL3_U04] The graduate is able to plan and carry out simple research tasks in the biological sciences under the guidance of a supervisor	knows how to make and correctly describe the constituent elements of a soil profile of the soil	[SU8] observation of student's independent or team work
	[OZPL3_U06] The graduate is able to make observations and perform basic physical, biological and chemical measurements in the field or laboratory	conducts field observations of abiotic features of forest and non-forest habitats and performs and determines the basic parameters characteristics of the habitat	[SU3] text preparation/written work
	[OZPL3_U01] The graduate is able to use basic apparatus and research tools and maintains the correct sequence of operations in laboratory and field work	selects and applies procedures and research techniques and tools used in habitat science	[SU6] demonstration of practical skills
	[OZPL3_W13] The graduate has an advanced understanding of the fundamental rules, methods, and techniques of environmental research and their potential applications in nature conservation	Has knowledge of habitat science, concerning procedures and methods of soil testing	[SW3] text preparation/written work
	[OZPL3_W06] The graduate has an advanced understanding of the names and types of natural environments, including their structural and functional characteristics	Knows the systematics, characteristics of different types and genera - understands the processes of formation and differentiation of terrestrial biotopes and their functioning in ecosystems	[SW3] text preparation/written work
[OZPL3_K07] The graduate is prepared to demonstrate responsibility for the equipment/ materials entrusted and respects the work of others	Is responsible for the equipment/ materials entrusted to him and his own work, and respects the the work of others	[SK8] observation of student's independent or team work	
Subject contents	Field methods of soil testing. Methodology of soil profile description and sampling for laboratory analysis. Recognition of soil types. Recognition of forest habitat types and their relationship to plant communities. Relationships between vegetation and soil. Application of habitat science in nature conservation.		
Prerequisites and co-requisites	Basic knowledge of general ecology and plant ecology		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written coursework assignment	51.0%	100.0%
