

**Subject card**

<b>Subject name and code</b>	Geodesy and cartography - field exercises, PG_00091494						
<b>Field of study</b>	Water Management and Protection of Water Resources						
<b>Date of commencement of studies</b>	October 2024	<b>Academic year of realisation of subject</b>			2024/2025		
<b>Education level</b>	undergraduate studies	<b>Subject group</b>			Obligatory subject group in the field of study		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	1	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	2	<b>ECTS credits</b>			1.0		
<b>Learning profile</b>	practical	<b>Assessment form</b>					
<b>Conducting unit</b>	Pracownia Systemów Informacji Geograficznej - GIS -> Faculty of Oceanography and Geography						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr Maciej Markowski				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	0.0	15.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	15		0.0		15.0	30
<b>Subject objectives</b>	Acquiring theoretical and practical knowledge in the field of geodesy and cartography. During the classes, students learn the principles of conducting measurements necessary for creating site plans, topographic maps, and terrain profiles.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GWOZWL3-W04] research techniques, methods and tools currently used in water management and protection of water resources both in the field of natural sciences and social sciences, including basic statistical and information technology tools that make it possible to describe, model and interpret data on phenomena and processes occurring in the aquatic environment, as well as tools for describing relationships in social-ecological systems	Student knows and understands the theories, methods, and techniques of data acquisition used in geodesy and cartography, which allow for describing and studying complex relationships in water management and water resource protection in both natural and social sciences. This knowledge enables the use of basic statistical and IT tools for processing and interpreting data related to phenomena and processes occurring in the aquatic environment, explaining the relationships within socio-ecological systems. Contents: C1-C3.	[SW4] test/exam - oral or written [SW5] implementation of a problem task
	[GWOZWL3-U07] use literature and other available sources of information, including information technology, multimedia, Internet, databases, and select and critically evaluate information	Student is able to use literature and other available information sources, including information technology, multimedia, internet resources, and databases in the field of geodesy and cartography, and to select and critically evaluate information related to basic natural science issues concerning water management and water resource protection. Contents: C1-C3.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU6] demonstration of practical skills
	[GWOZWL3-K05] take responsibility for the safety of their own work and that of others, dealing with emergencies, exercising caution in the laboratory and in the field, responsibility for entrusted equipment and apparatus	Student is ready to fulfill social obligations and co-organize activities for the benefit of the community. Is responsible for entrusted equipment and teaching materials, as well as for the safety of own work and that of others. Contents: C1-C3.	[SK6] demonstration of practical skills [SK8] observation of student's independent or team work
	[GWOZWL3-U02] select and independently apply basic research techniques and tools, with adhering to established analytical procedures in the field of environmental research in water management, adequately to the considered research problem	Student using basic measurement techniques and tools, is able to perform fundamental tasks in geodesy and cartometry to utilize their results in the analysis of the spatial differentiation of natural processes and phenomena related to water management and water resource protection. Contents: C1-C3.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU6] demonstration of practical skills
	[GWOZWL3-U16] demonstrate creativity in working independently and in team, taking on a variety of roles, including a leadership role	Student is able to cooperate and work in a group, assuming various roles. Contents: C1-C3.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU6] demonstration of practical skills
Subject contents	<ol style="list-style-type: none"> <li>1. Construction and use of geodetic instruments: theodolite (total station) and levelling.</li> <li>2. Execution of a closed leveling loop, longitudinal profile.</li> <li>3. Execution of a closed traverse using trigonometric leveling, hypsometric sketch, and/or execution of angular forward intersection to determine the coordinates of an inaccessible point.</li> </ol>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	class attendance	100.0%	0.0%
	oral answer	51.0%	33.34%
	credit work in groups	51.0%	66.66%
