

**Subject card**

Subject name and code	Reproductive biotechnology - lecture, PG_00099400						
Field of study	Marine Biotechnology						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	postgraduate studies	Subject group					
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English English		
Semester of study	2	ECTS credits			2.0		
Learning profile	academic	Assessment form					
Conducting unit	Pracownia Akwakultury -> Katedra Biologii Morza i Biotechnologii -> Faculty of Oceanography and Geography						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Konrad Ocalewicz					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	5.0		20.0	55	
Subject objectives	The general aim of the course is to provide students with in-depth knowledge of the biological basis of reproduction of fish and aquatic invertebrates as well as information on progress in the reproductive technology of organisms bred in aquaculture and model organisms. The student will gain knowledge about the tools used for assisted fish reproduction in aquaculture and the connections between biotechnological reproductive methods and research in the area of developmental biology, molecular biology, and genetic engineering.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[MBMU2-KW02] Has advanced knowledge of the possibilities of biotechnological use of marine resources	Has extensive knowledge and understanding of vertebrate reproduction water and reproductive technologies used for their breeding in control conditions.			[SW4] test/exam - oral or written		
	[MBMU2-KU01] Can plan and carry out tests in the laboratory and at sea, and document activities and results; can use laboratory equipment under the guidance of a tutor; applies principles of occupational health and safety	Has the ability to plan and conduct research on fish reproduction and gamete biotechnology in the laboratory, documenting experiments and their results; is able to draw conclusions based on the results obtained during work laboratory.			[SU6] demonstration of practical skills		
	[MBMU2-KK04] Is ready to assess and understand the risks and dilemmas, including ethical dilemmas associated with conducting scientific research and introduction of advanced technologies; understands and appreciates the importance of intellectual property; acts ethically	Has the ability to assess and understand ethical dilemmas and threats related to research focusing on reproductive biotechnology and modern reproductive techniques.			[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report		

Subject contents	A1: Embryogenesis of fish and marine invertebrates. Maternal-embryonic transition. A2: Gametogenesis in fish. A3: Gamete quality and short- and long-term sperm storage/preservation. A4: Molecular and physiological aspects of fertilization. A5: Genetic and environmental sex determination. A6: Gonadal differentiation and sexual maturation. A7: Hormonal and environmental control of gonadal differentiation and sexual maturation. A8: Induced androgenesis, gynogenesis and polyploidization. A9: Transgenesis in invertebrates and aquatic vertebrates. A10: Genome editing from morpholino to CRISPR. A11: Chimerism and primary transfer of germ cells. A12: Production of single-sex fish stocks. A13: Interspecific hybridization. A14: Production of clonal and isogenic fish lines. A15: Stem cells and their use in fish reproductive biology		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test 2	51.0%	50.0%
	test 1	51.0%	50.0%
