

Subject card

Subject name and code	GIS, PG_00117785						
Field of study	Oceanography						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	postgraduate studies	Subject group			Obligatory subject group in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	academic	Assessment form					
Conducting unit	Pracownia Systemów Informacji Geograficznej - GIS -> Faculty of Oceanography and Geography						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Maciej Markowski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		60.0	95
Subject objectives	Utilization of Geographic Information Systems (GIS) in oceanography for processing, visualization, and analysis of spatial data with a particular focus on environmental issues.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-U06] can use specialized computer software and advanced mathematical and statistical methods in data analysis and description of processes and phenomena occurring in the marine environment and coastal zone	The student is able to use specialized GIS software and mathematical and statistical methods to analyze spatial data concerning phenomena and processes occurring in the natural environment. Contents: B.1-B.8.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written
	[OCEANMU2-W05] knows and understands the principles of planning and conducting field and laboratory research as well as advanced methods and tools of scientific research, especially in the field of the studied specialty	The student knows and understands advanced techniques, research methods, and geoinformatics tools used in oceanography to describe and interpret phenomena and processes occurring in the aquatic environment, relevant to their field of study. Contents: B.1-B.8.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report
	[OCEANMU2-K03] is ready to effectively organize his/her own work, is active and persistent and punctuality in completing tasks, is ready to carrying out evaluation of their own activities	The student is prepared for effective self-organization of their work, demonstrates activity, persistence, and punctuality in task completion, is self-critical, and draws conclusions based on self-analysis. Contents: B.1-B.8.	[SK2] presentation/project/paper/report
	[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	The student is able to analytically and synthetically process research results and spatial analyses using GIS. Contents: B.1-B.8.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written
[OCEANMU2-U05] is able to use source information in Polish and a selected foreign language, including archival and electronic databases, in the field of oceanographic issues, performs critical analysis and synthesis of information	The student can utilize information from various sources, such as literature and electronic databases. Contents: B.1-B.8.	[SU2] presentation/project/paper/report	
Subject contents	<p>B1. Advanced symbolization techniques including labeling procedures.</p> <p>B2. Data processing in the context of modifying cartographic projections.</p> <p>B3. Concept and creation of geodatabases.</p> <p>B4. Remote sensing methods for environmental monitoring.</p> <p>B5. Using DEM and DSM to identify areas meeting selected input criteria - "case study."</p> <p>B6. Processing three-dimensional bathymetric data.</p> <p>B7. Vector modeling using geospatial analysis tools.</p> <p>B8. Raster modeling using geospatial analysis tools.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	practical exercises	51.0%	66.66%
	test	51.0%	33.34%
