

Subject card

Subject name and code	Coastal geodynamics - lecture, PG_00117769						
Field of study	Oceanography						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2025/2026	
Education level	postgraduate studies	Subject group			Obligatory subject group in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			2.0		
Learning profile	academic	Assessment form					
Conducting unit	Katedra Geofizyki -> Faculty of Oceanography and Geography						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Leszek Łęczyński				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		17.0		13.0	60
Subject objectives	Introduction to the terminology of processes and conditions of coastal formation on the sea coast.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	Can analytically and synthetically process the results of research and analysis and on their basis make correct conclusions, in the field of coastal geodynamics	[SU4] test/exam - oral or written
	[OCEANMU2-U02] can use scientific terminology fluently and appropriately in presenting and discussing problems in the field of oceanography	Can fluently and appropriately use current scientific terminology in the field of coastal geodynamics in presenting and discussing problems concerning it	[SU4] test/exam - oral or written
	[OCEANMU2-W06] knows and identifies potential threats to the marine environment on a local and global scale resulting from strong anthropopressure, predicts their effects on various time and space scales	Knows and identifies potential threats to the marine environment at local and global scales resulting from strong anthropopression, predicts their effects at different spatiotemporal scales, and knows and understands the impact of human activities on coastal geodynamics	[SW4] test/exam - oral or written
	[OCEANMU2-U05] is able to use source information in Polish and a selected foreign language, including archival and electronic databases, in the field of oceanographic issues, performs critical analysis and synthesis of information	Can use source information, in Polish and English, including archival and electronic databases, in the field of coastal geodynamics	[SU4] test/exam - oral or written
	[OCEANMU2-W01] knows and understands in-depth specialized terminology used in oceanography and related sciences (in Polish and a selected foreign language)	He/she knows and understands specialist terminology in oceanography and related sciences (in Polish and a selected foreign language) relevant to coastal geodynamics.	[SW4] test/exam - oral or written
[OCEANMU2-W02] knows and understands complex processes and phenomena occurring in the marine environment, with particular emphasis on the coastal zone, as well as complex relationships between living and non-living elements of the aquatic environment	Understands and understands, to a deeper degree, the complex processes and phenomena taking place in the marine environment with particular emphasis on the coastal zone and the complex interrelationships between animate and inanimate elements of the aquatic environment.	[SW4] test/exam - oral or written	
Subject contents	<p>Geological conditions of cliff edge formation. Terminology of cliff shores. Surface mass movements. Geodynamics of cliff shores of the Gdańsk region. Characteristics of basic processes of sea dynamics shaping sea shores. Differential and transport of debris in the coastal zone from cliff abrasion. Factors shaping the beach. Aeolian processes: basic mechanisms, sediment movement. Circulation cells and longshore transport. Anthropogenic transformation of the marine coastal zone.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	51.0%	100.0%
Recommended reading	Basic literature	-	
	Supplementary literature	-	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	-		
Work placement	Not applicable		

Document generated electronically. Does not require a seal or signature.
