

Subject card

Subject name and code	Managerial Decisions in Logistics, PG_00122218						
Field of study	Economics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	Master's studies	Subject group			Obligatory subject group in the field of study Specialty subject group		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			5.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Department of Logistics -> Faculty of Economics -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Beata Chmiel				
	Teachers		dr Beata Chmiel				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	To introduce students to the basic methods of optimisation decision support used in logistics and to impart skills for their practical use.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[EKONMU2_U13] can manage teamwork as well as interact and work in a team (including in an international environment) assuming a leading role in it	The student is able to interact and work in a team, assuming various roles in the team, including a leading role.	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report [SU8] observation of student's independent or team work
	[EKONMU2_U04] can forecast and model complex economic and social processes using quantitative and qualitative methods and tools developed by economic sciences (including statistics and econometrics)	The student is able to model complex logistical processes using methods and quantitative tools developed by the economic sciences.	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	[EKONMU2_W06] knows in advanced stage statistical and econometric methods and tools for description and macro- and microeconomic modelling of economic structures and public institutions and processes occurring in them	The student is familiar with methods and tools for modelling logistical decision-making situations.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report
	[EKONMU2_W08] has an in-depth knowledge of processes occurring in enterprises and economic organisations and with related areas, as well as of processes of change in public institutions; knows methods of research on the regularities governing these changes, taking into account the influence of external stakeholders on them	The student has an in-depth knowledge of the logistical processes taking place in enterprises.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report
	[EKONMU2_K03] inspires and organises preparation of economic and social projects, following the idea of sustainable development, reconciling legal, economic, ecological, political and social requirements	The student inspires and organises the preparation of economic projects.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report [SK4] test/exam - oral or written [SK8] observation of student's independent or team work

Subject contents	<p>1 The managerial decision-making process in logistics</p> <ul style="list-style-type: none"> Areas of managerial decision-making in logistics Optimisation versus sub-optimisation Corporate decision-making process Models in the enterprise Types of models Examples of models Decision models Components of a decision-making model Stages in the construction of a decision-making model Example of the construction of an optimisation model <p>2 Linear programming theory</p> <ul style="list-style-type: none"> Features of linear programming models Construction of a logistic optimisation model Algorithm for using the SOLVER tool Possibilities of using the SOLVER tool <p>4 Examples of linear programming models</p> <ul style="list-style-type: none"> Optimal selection of the production assortment Integer linear programming Other possible constraints in linear programming The dieting problem Graphical method for solving a linear programming model Duality in linear programming Transport problem Balanced and unbalanced transport problem Route blockage problem in a transport problem Transport problem with transshipment (mediator problem) The allocation problem <p>5 Network programming theory</p> <ul style="list-style-type: none"> Selected concepts of graph theory Graphical illustration of a graph <p>6 Examples of network programming models - case studies</p> <ul style="list-style-type: none"> Transport model with transshipment Shortest route model Equipment exchange model Maximum flow model 														
Prerequisites and co-requisites	Basic knowledge of logistics.														
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;">Subject passing criteria</th> <th style="width: 30%;">Passing threshold</th> <th style="width: 30%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Active participation in classes (possibility of additional points)</td> <td>0.0%</td> <td>0.0%</td> </tr> <tr> <td>project</td> <td>51.0%</td> <td>30.0%</td> </tr> <tr> <td>assessment test</td> <td>51.0%</td> <td>70.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Active participation in classes (possibility of additional points)	0.0%	0.0%	project	51.0%	30.0%	assessment test	51.0%	70.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
Active participation in classes (possibility of additional points)	0.0%	0.0%													
project	51.0%	30.0%													
assessment test	51.0%	70.0%
