| Subject name and code | Hydroacoustic survey systems - lecture, PG_00131484 | | | | | | |
| Field of study | Marine Hydrography | | | | | | |
| Date of commencement of studies | October 2024 | Academic year of realisation of subject | | | 2025/2026 | | |
| Education level | Bachelor's studies | Subject group | | | Obligatory subject group in the field of study Subject group related to practical vocational preparation | | |
| Mode of study | full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 2 | Language of instruction | | | Polish Polish | | |
| Semester of study | 4 | ECTS credits | | | 2.0 | | |
| Learning profile | practical | Assessment form | | | credit | | |
| Conducting unit | | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr inż. Artur Grządziel | | | | |
| | Teachers | | | | | | |
| Lesson types | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 0.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 30 | | 2.0 | | 20.0 | 52 |
| Subject objectives | Providing knowledge of basic hydroacoustic devices and systems used in hydrographic surveying. Improving system configuration, assembly and operation skills. | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | | Method of verification | |
| | [HML3-W04] the issue of measurements related to the exploration of sea basins and inland waters and tools allowing to describe, interpret and present the results of measurements | | knows: - Issues of measurements related to hydrographic studies of marine and inland waters and survey systems enabling the description, interpretation and presentation of research results. | | | [SW4] test/exam - oral or written | |
| | [HML3-W07] principles of operation and use of measuring instruments used in professional activities related to the field of study, including the principles of their calibration and assessment of accuracy | | knows: - Principles of operation and use of sonar technology | | | [SW4] test/exam - oral or written | |
| | [HML3-W12] basic processes taking place in the life cycle of devices, facilities and technical systems | | knows: - Basic processes occurring in the life cycle of devices, objects and technical systems | | | [SW4] test/exam - oral or written | |
| | [HML3-W08] principles of operation and use of measuring instruments used in professional activities related to the field of study, including principles for their calibration and accuracy assessment | | knows: - Principles of operation and use of survey devices and equipment used in hydrographic research, including the principles of their calibration and accuracy assessment | | | [SW4] test/exam - oral or written | |

| Subject contents | <p>Introductory classes. Development of hydroacoustic systems. Acoustic waves and their propagation in the aquatic environment. Speed of sound in water, properties of water, vertical distribution of sound speed in the water column. Refraction and path of acoustic rays in the water column. Construction and operation of the transducer, characteristics of the acoustic beam. Single beam echo sounders. Dual beam echo sounders, split beam echo sounders. Construction of SBES. Principle of operation of vertical echo sounders. Configuration, installation and operation of SBES. Selection of the appropriate range, scale, signal frequency, pulse sending frequency in terms of spatial resolution. SBP systems (sub-bottom profilers). Validation and calibration.</p> <p>Side-scan sonar systems. Principle of operation, structure, signal geometry and launching of SSS systems. Interpretation of data from a single-beam echosounder. Sonar images and causes of data distortions and disruptions. Swath technology systems. Properties of the acoustic beam. Transducer elements and matrices (antenna arrays). Beam forming and beam steering techniques. Phased and interferometric and multi-beam systems. Principles of operation, structure and geometry of MBES and interferometric systems (with phase measurement). Amplitude and phase detection method. Bottom coverage with measurements. Changes in the size of the acoustic trace and the spacing between beams. Installation of transducers on the hull and in the outboard mount. Monitoring the surface speed of sound and the velocity distribution in the water column. Operation (service). Gain, power and pulse length.</p> <p>Data quality control procedures. Configuration, installation and operation of the swath system. Control of acoustic parameters for optimal system operation. Application of quality control procedures in the process of data recording and online processing.</p> | | | | | | | | | | | |
