University of Gdańsk

Subject card

Subject name and code	Selected topics in sea dynamics, PG_00131530		
Field of study	Marine Hydrography		
Date of commencement of studies	October 2024	Academic year of realisation of subject	2026/2027
Education level	Bachelor's studies	Subject group	Optional subject group
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	2.0
Learning profile	practical	Assessment form	credit
Conducting unit	Laboratory of Physical Oceanography -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Witold Cieślikiewicz	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	0.0	0.0	0.0	30

E-learning hours included: 0.0

Additional information:
DiscussionLecture with multimedia presentation

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	2.0	20.0	52

Subject objectives

To introduce students to the phenomena of sea waves, sea currents - an in-depth discussion of selected issues.To explain to students selected elements of marine dynamics in analytical terms.To prepare students for the practical application of basic issues related to modern marine dynamics.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[HML3-K02] correctly determine the priorities in professional work for the implementation of a task specified by himself/ herself or others	To correctly prioritise their work to achieve a task defined by themselves or others.	[SK4] test/exam - oral or written
[HML3-W02] selected phenomena and processes occurring in the hydrosphere, atmosphere, lithosphere and biosphere, their interconnections and relations, as well as practical applications of this knowledge in professional activities related to the field of study	Phenomena and processes in the hydrosphere and atmosphere and their interrelationships.	[SW4] test/exam - oral or written
[HML3-W01] selected facts, phenomena and processes, as well as methods and theories concerning them, explaining the complex relationships between them, constituting basic general knowledge in the field of scientific disciplines forming the theoretical foundations specific to the field of study	At an advanced level, marine hydrodynamics with its mathematical description; its relationship to the laws of physics and its relationship in relation to natural processes; knows and understands the theoretical foundations of other areas of science necessary to formulate and solve typical tasks related to marine dynamics.	[SW4] test/exam - oral or written

Subject contents	Lectures: Forces acting on a moving fluid element. Basic equations of fluid dynamics - equations of conservation of mass and momentum. Large-scale circulation of water masses in the oceans - geostrophic currents - fundamentals, atmospheric and oceanic boundary layers, Ekman spiral and Ekman pumping, western intensification. Wind pile-ups. Basic equations and simplifications for regular waves. Waves - sine waves, Stokes waves, knoidal waves, solitary waves. Refraction, transformation and refraction of waves in the coastal zone - basics. Statistical characteristics of wind waves. Wave prediction methods.	
Prerequisites and co-requisites		
Assessment methods and criteria	Subject passing criteria: colloquium	Passing threshold: 51.0% / Percentage of the final grade: 100.0%
