

**Subject card**

<b>Subject name and code</b>	Physiochemical detection methods in forensic science, PG_00082047						
<b>Field of study</b>	Chemistry						
<b>Date of commencement of studies</b>	October 2024	<b>Academic year of realisation of subject</b>			2026/2027		
<b>Education level</b>	Bachelor's studies	<b>Subject group</b>			Obligatory subject group in the field of study		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	3	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	5	<b>ECTS credits</b>			2.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			credit		
<b>Conducting unit</b>	Laboratory of Electroanalysis and Biosensors -> Department of Analytical Chemistry -> Faculty of Chemistry -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr hab. Paweł Niedziałkowski				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	30		5.0		15.0	50
<b>Subject objectives</b>	Introduction to basic law terms and definitions in forensic science. Introduction to basic physical and chemical analysis used in forensic science. Introduction to basic chemical methods used in forensic science. Introduction to basic analyses and methods of revealing traces in forensic science. Developing the ability to carry out the basic procedures related to the detection and preservation of traces in forensic science.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[CHEML3_U03] Selects the appropriate equipment and laboratory apparatus for conducting uncomplicated chemical experiments.	The student have a knowledge of the analytical equipment used in forensic analysis. Students have a knowledge of the chemical apparatus used in forensic analys	[SU4] test/exam - oral or written
	[CHEML3_W04] Characterises the basic methods of chemical compound analysis.	Explains the principles of sample preparation for physicochemical analysis in forensic science. Explains and recognizes the basic analytical procedures and methods in forensic science.	[SW4] test/exam - oral or written
	[CHEML3_U05] Uses basic statistical methods and IT techniques to describe chemical processes and analyse experimental data.	Acquires knowledge of measurement data analysis methods. Acquires knowledge of statistical analysis.	[SU4] test/exam - oral or written
	[CHEML3_W02] Describes the properties of elements and the most important chemical compounds, enumerates the methods of their preparation and methods of analysis.	The student will be able to identify the chemical methods used to analyse the elements and chemical compounds. Student will be able to list basic analytical methods used to analyse chemical compounds.	[SW4] test/exam - oral or written
	[CHEML3_W10] Enumerates and describes the basic aspects of the construction, operation and use of measuring apparatus and equipment used in experimental works in the field of chemistry and related sciences.	Can mention the apparatus used in forensic analysis. Knows the physical and chemical methods used in forensic science. Recalls the basic principles and legal procedures in forensic science.	[SW4] test/exam - oral or written
	[CHEML3_K05] Observes established procedures in laboratory work and is responsible for the safety of her/his and others' work.	Understands the need for further education to acquire specialist qualifications. Anticipates the effects of the use of psychoactive drugs and narcotic drugs.	[SK4] test/exam - oral or written
[CHEML3_U07] Prepares documented elaboration on a specific problem in the field of selected chemical and physical issues.	Acquaints oneself with the basic methods of preparing data obtained in measurements for forensic purposes.	[SU4] test/exam - oral or written	
Subject contents	Forensics Science - the basic concepts, scope of research. Inspection. Forensic physicochemistry - general concepts. Research methodology used in forensic science, classical qualitative analysis, chromatographic methods (TLC, GC, HPLC), spectrophotometry (IR, UV VIS, MAS, NMR, INR), electrochemistry (CV, electrography, etc.), microscopic examination. The scope of chemical research in forensics science, research of fuel, research of alcohol, research of psychoactive drugs, drug research, determination of causes of fires, explosions, examination of paint coatings, microscopic tests, testing of gunshot residues, testing of metals and their alloys, testing of cosmetics, testing of chemicals used in the household. Dactyloscopic and dermatoscopic traces, osmology, basic concepts, methods of protection traces. Analysis of phonoscopic traces. Mechanical and traseological traces. Forensic analysis of the writing and its pathology. Documentation as a forensic trace. Regulations, routines and legal aspects in forensic science and analytical practice.		
Prerequisites and co-requisites	Prerequisites: applying safety rules in a chemical laboratory, using laboratory glassware, knowledge of chemical reactions including their effects, having basic knowledge of chromatographic and spectroscopic techniques and of the basic physico-chemical properties of organic substances  Specification of other subjects: Completed course in general chemistry, analytical chemistry and organic chemistry.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test/exam	51.0%	100.0%
