

Subject card

Subject name and code	Biological chemistry. Analysis of interactions between and intra-molecular biomolecules, PG_00145770						
Field of study	Biotechnology						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	undergraduate studies	Subject group					
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	academic	Assessment form					
Conducting unit	Instytut Biotechnologii UG -> Intercollegiate Faculty of Biotechnology UG-MUG						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Monika Górską-Arcisz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	8.0	10.0	0.0	0.0	0.0	18
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	18		10.0		22.0	50
Subject objectives	The course aims to impart principles of gathering and interpreting comprehensive information about a molecule based on its chemical structure. Students will learn to predict intermolecular and intramolecular interactions (attraction or repulsion) of biomolecules, understand chirality and conformational changes in molecules. They will become familiar with important chemical functional groups, their ionization abilities, and free radical formation, as well as applying this analysis to understand fundamental biological phenomena.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[BIOTECHL3_W06] The graduate knows and understands basic knowledge in science and natural sciences necessary for understanding the phenomena and biological processes, particular cellular processes at the molecular level		The student knows the principles of gathering and interpreting comprehensive information about a molecule of a chemical compound based on its chemical structure and other data, such as physicochemical properties.		[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report [SW5] implementation of a problem task		
	[BIOTECHL3_W01] The graduate knows and understands basic biological phenomena at the molecular level, he/she is familiar with their significance for biotechnology.		The student possesses the ability to predict interactions (attraction or repulsion) both within the molecule and with other chemical structures. The student understands the phenomena of chirality and conformational changes in a chemical molecule, and knows the most important chemical functional groups, their ability to ionize, and to form free radical systems.		[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report [SW5] implementation of a problem task		

Subject contents	<p>Lectures:</p> <ul style="list-style-type: none"> - Determining the potential of molecular intermolecular and intramolecular interactions for selected chemical compounds. - The concept of solving chemical problems in biology based on research on structure-activity relationships. - Determination of the relative risk of toxicity and ecotoxicity of benzene towards toluene based on T-SAR. - The potential of intra-molecular interactions present in the unfolded structure of DNA and chromatin. - Analysis of the potential of interactions in higher structures of protein organization (secondary, tertiary, and quaternary). <p>Auditory exercises:</p> <ul style="list-style-type: none"> - Understanding the chemical structure of compounds. - Ability for intra- and intermolecular interactions. - Shape and plasticity of a chemical molecules. - Molecular basis of chemical reactivity of molecules and their biological function. 											
Prerequisites and co-requisites	The required basic knowledge, competences, and skills specified for Module 01.											
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;">Subject passing criteria</th> <th style="width: 30%;">Passing threshold</th> <th style="width: 30%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Written exam with open-ended and multiple-choice questions</td> <td>51.0%</td> <td>85.0%</td> </tr> <tr> <td>Presentation</td> <td>51.0%</td> <td>15.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Written exam with open-ended and multiple-choice questions	51.0%	85.0%	Presentation	51.0%	15.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Written exam with open-ended and multiple-choice questions	51.0%	85.0%										
Presentation	51.0%	15.0%
