<b>Subject objectives</b>	The purpose of the course is to familiarize the student with the structure and functioning of the cell as the basic unit of life. During the course the Student will gain detailed knowledge of the organization of the structure of the prokaryotic cell, the animal eukaryotic cell and the plant and fungal eukaryotic cell . The student will become familiar with the legal regulations related to the work with the biological agent, learn the basic techniques and research tools used in cell biology to observe and analyze the functioning of cells and their components .
