

**Subject card**

<b>Subject name and code</b>	Biomolecules - structure, synthesis and properties Methodology (M02_B1), PG_00153661						
<b>Field of study</b>	Biotechnology						
<b>Date of commencement of studies</b>	October 2024	<b>Academic year of realisation of subject</b>			2024/2025		
<b>Education level</b>	undergraduate studies	<b>Subject group</b>					
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	1	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	2	<b>ECTS credits</b>			6.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>					
<b>Conducting unit</b>							
<b>Name and surname of lecturer (lecturers)</b>	Subject supervisor		dr hab. Katarzyna Węgrzyn				
	Teachers						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	90.0	0.0	0.0	90
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	90	30.0	50.0	170		
<b>Subject objectives</b>	Program block 01 in Module 02 aims to provide detailed knowledge about the structure and properties of biomolecules (such as active low- and medium-molecular-weight compounds as well as proteins, nucleic acids, sugars and lipids) that create more complex biological systems, cellular compartments. The student will acquire practical skills related to the use of biomolecule isolation methods and their biochemical, biophysical and bioinformatic analysis. The student will gain awareness of safety rules for working in the laboratory and will acquire competences to work independently and in a team.						
<b>Learning outcomes</b>	<b>Course outcome</b>	<b>Subject outcome</b>		<b>Method of verification</b>			
	[BIOTECHL3_U01] The graduate is able to do basic laboratory work; document activities and results; use basic techniques under the supervision of the supervisor in laboratory work and research tools necessary in biotechnology, with particular emphasis on the analysis of methods of isolation, modification, selection and analysis of organisms, tissues, cells and molecules; handle basic laboratory equipment.	The student has practical skills related to the use of methods for the isolation of biomolecules and their biochemical, biophysical and bioinformatic analysis. Is able to document activities and results of analyzes performed.		[SU1] oral statement/conversation/discussion [SU3] text preparation/written work [SU4] test/exam - oral or written [SU6] demonstration of practical skills [SU8] observation of student's independent or team work			
	[BIOTECHL3_K02] The graduate is willing to work in a team, in particular to carry out joint laboratory work.	The student has the competence to work independently and in a team, in particular, joint implementation of laboratory work.		[SK8] observation of student's independent or team work			
	[BIOTECHL3_K04] The graduate is willing to understand the importance of work safety rules, in particular laboratory work; apply the principles of work safety; be responsible for his/her own safety and that of others; be able to act in emergency situations.	The student is aware of the safety rules for working in the laboratory.		[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK8] observation of student's independent or team work			

Subject contents	<p>M1. Laboratory exercises (computer room)</p> <p>Bioinformatic methods in the analysis of nucleic acids and proteins</p> <ul style="list-style-type: none"> <li>• Identification and retrieval of information related to nucleotide and amino acid sequences</li> <li>• Visualization of the spatial structures of biomolecules</li> <li>• Basic taxonomic and evolutionary analysis of biomolecules</li> <li>• Identification of metabolic pathways</li> </ul> <p>M2. Laboratory exercises</p> <p>1. Basic calculations in laboratory work</p> <p>2. Carbohydrates</p> <ul style="list-style-type: none"> <li>• thin layer chromatography</li> </ul> <p>3. Nucleic acids</p> <ul style="list-style-type: none"> <li>• Genomic DNA isolation</li> <li>• plasmid DNA isolation</li> <li>• determination of phosphates in RNA and DNA</li> <li>• agarose electrophoresis of nucleic acids</li> <li>• PCR</li> </ul> <p>4. Proteins</p> <ul style="list-style-type: none"> <li>• Salting out proteins</li> <li>• Protein electrophoresis under denaturing conditions,</li> <li>• Coomassie Blue staining</li> <li>• Protein overproduction in the bacterial system and its purification (affinity chromatography)</li> <li>• Protein electrophoresis under denaturing conditions, silver staining</li> <li>• Molecular filtration</li> <li>• protein immunodetection - Western blotting, ELISA</li> <li>• protein immunodetection - ELISA</li> </ul> <p>5. Lipids</p> <ul style="list-style-type: none"> <li>• Extraction of lipids from various biological materials and analysis of the lipid composition of the obtained extracts</li> <li>• Analysis of the fatty acid composition of selected lipids and detection of selected isoprenoids</li> </ul>
