

Subject card

Subject name and code	Artificial Intelligence Methods, PG_00157344						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		1.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Statistics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Krzysztof Najman				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		10.0		15.0	40
Subject objectives	The aim of the course is to familiarize students with the essence of artificial intelligence, basic topologies of artificial neural networks, methods of their training and verification, as well as their fields of application.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[liEMU2_U02] The student is able to proficiently acquire detailed information about economic processes and phenomena through direct observation, planned experimentation or database queries, as well as collect and process it using modern information technology tools.	The student is able to collect statistical data from primary and secondary sources for the purposes of implementing social research using artificial intelligence models.	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[liEMU2_K01] The student understands the need for continuous completion and deepening of acquired knowledge. The student inspires and organizes others' learning processes.	Understands the need to constantly update knowledge in the field of artificial intelligence.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report
	[liEMU2_U05] The student is able to make a statistical description of basic and detailed economic categories at an advanced level, formulate and verify hypotheses about their formation.	The student is able to independently conduct an analysis of selected social phenomena using selected models of artificial neural networks	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[liEMU2_W04] The student has an in-depth knowledge of advanced mathematical, statistical, econometric and IT methods that enable the acquisition, processing and analysis of data reflecting the functioning and growth of the national economy and its components, as well as the phenomena and processes occurring in their environment.	Has in-depth knowledge of advanced data analysis methods using selected artificial neural network models.	[SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report
	[liEMU2_K02] The student can communicate freely with the public on specialised topics in the field of computer science and econometrics in and outside the workplace, communicate his knowledge and share his skills through various media. Culturally participates in discussions, is not afraid to ask questions and knows how to give constructive criticism.	Is able to discuss, communicate and share knowledge in the theory and practice of using artificial intelligence models.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report
	[liEMU2_K03] The student is able to communicate freely with the public inside and outside the workplace, transfer his knowledge and share his skills through various media.	The student is able to communicate, share knowledge and skills in the field of artificial intelligence methods.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report
	[liEMU2_W05] The student has an in-depth knowledge of socio-economic data sources, their databases and how to create them.	The student knows the sources and methods of searching for secondary data used in social research using artificial intelligence methods.	[SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report

Subject contents	1. History and directions of artificial intelligence research, application areas. Biological prototype of neural computations. 2. Construction of a mathematical neuron. Perceptron. Types and properties of basic transformation functions. 3. Basic methods of learning a mathematical neuron. (Perceptron Learning Rule) 4. Selected architectures of artificial neural networks: layered, unidirectional and recurrent networks, networks with variable structure, self-learning networks. 5. Methods of learning artificial neural networks: learning rules, state and weight space, minimization of the value of the network error function. 6. Methods of preparing data for analyses based on artificial neural networks: training sets, test sets, control sets, data transformations, preprocessing and postprocessing. 7. Construction and methods of learning layered artificial neural networks. Error backpropagation algorithm and its variants. 8. Construction and methods of learning recurrent artificial neural networks. Elman, Hopfield network, LSTM (Long short-term memory). 9. Evaluation of the quality of neural models, evaluation of network stability, the problem of loss of generalization ability (underfitting, overfitting), network regularization. 10. Selected applications of artificial neural networks - approximation problem, regression problem, classification problem, time series forecasting. 11. Practical remarks on the process of building artificial intelligence models. 12. Advantages and disadvantages of using artificial neural networks.		
Prerequisites and co-requisites	Advanced knowledge of statistics, econometrics, and linear algebra. Basic programming skills in Python.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	semester project	51.0%	100.0%
