

Subject card

Subject name and code	Principles of chemistry with elements of inorganic chemistry, PG_00158583						
Field of study	Nuclear safety and radiological protection						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	undergraduate studies		Subject group		Obligatory subject group in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish not applicable		
Semester of study	1		ECTS credits		9.0		
Learning profile	academic		Assessment form				
Conducting unit	Katedra Chemii Bionieorganicznej -> Faculty of Chemistry -> Rektor						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Agnieszka Chylewska				
	Teachers		dr hab. Agnieszka Chylewska Magdalena Stasiuk mgr Natalia Żukowska mgr inż. Paulina Nowicka mgr Aleksandra Ciesielska dr hab. Aleksandra Dąbrowska				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	30.0	0.0	0.0	105
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	105		0.0		110.0	215
Subject objectives	Learning the basic types of inorganic compounds and methods of chemical calculations. Developing the ability to independently experiment and solve analytical problems.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BJORL3_W03] knows how to plan and perform a simple physical or chemical experiment and analyze the results obtained; knows the elements of the theory of measurement uncertainty as applied to experiments; knows the basic units of the SI system and its most important derived units; knows other systems of measurement units	Can carry out simple chemical experiments in the field of basic chemistry. Can analyze and draw conclusions based on the results of laboratory work. Knows and uses basic units of measurement.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report [SW3] text preparation/written work
	[BJORL3_W05] has knowledge of the elementary components of matter and the types of fundamental interactions between them, the manifestations of these interactions in phenomena occurring at scales ranging from subatomic to subatomic, knows the time and energy scales associated with these phenomena; knows the basics of biology and ecology in understanding the biological and ecological aspects of nuclear safety and radiation protection	Classifies, names and characterizes the basic types of chemical compounds. Lists and describes the properties of chemical substances. Defines the basics of ecology in the field of nuclear safety and radiological protection.	[SW4] test/exam - oral or written [SW3] text preparation/written work
	[BJORL3_U01] can formulate the basic laws of physics and chemistry using mathematical formalism	Uses basic equations describing chemical laws to determine physicochemical parameters.	[SU3] text preparation/written work [SU4] test/exam - oral or written
	[BJORL3_U03] is able to use the formalism of physics and chemistry to describe phenomena in the microworld; is able to use the methodology of biology and ecology to an elementary extent when describing the effects of radiation on biological objects and in the environment	Correctly presents and explains chemical phenomena and processes with radiochemistry and nuclear safety.	[SU3] text preparation/written work [SU4] test/exam - oral or written
	[BJORL3_W01] has a general knowledge of the basic concepts and principles of nuclear physics and chemistry, understands their historical development and their importance not only for nuclear safety and radiation protection, but also for understanding the modern world; has a basic knowledge of biology and ecology	Classifies, names and characterizes the basic types of chemical compounds, and defines and describes the basic methods of chemical analysis concerning nuclear chemistry.	[SW4] test/exam - oral or written [SW3] text preparation/written work
	[BJORL3_W02] Understands the role of physical and chemical experimentation, mathematical theoretical models approximating reality, and computer simulations in scientific research methodology; is aware of technological, apparatus, and methodological limitations in scientific research	Understands the role of a chemical experiment as a model approximating reality.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report [SW3] text preparation/written work
Subject contents	Lecture: Laws and concepts in chemistry. Atomistic theory of the structure of matter. Periodicity of physicochemical properties and the position of the element in the periodic table. Chemical bonds and interactions. Chemical equations and elements of stoichiometry. Equilibrium in solutions. Theories of acids and bases. Elements of nuclear chemistry. Exercises: basic chemical laws and calculations with unit conversion. Types of compounds and chemical reactions. Types of solutions and equilibria. Laboratory: occupational health and safety rules. Topics of exercises consistent with the lecture program.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	51.0%	30.0%
	Tests	51.0%	40.0%
	Tests and reports	51.0%	30.0%
