University of Gdańsk

Subject card

Subject name and code	Behavioral genetics, PG_00154582		
Field of study	Medical Biology		
Date of commencement of studies	October 2025	Academic year of realisation of subject	2027/2028
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	2.0
Learning profile	academic	Assessment form	credit
Conducting unit	Laboratory of Neurobiology -> Department of Animal and Human Physiology -> Faculty of Biology -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Wojciech Glac	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	0.0	0.0	0.0	15

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	15	3.0	32.0	50

Subject objectives

- Understanding of the genetic foundations of human behavior.
- Knowledge and understanding of the neurogenetic basis of interindividual and sex differences in the context of differential susceptibility to criminal behavior.
- Knowledge of the issue of genotypeenvironment correlation and interaction.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[BIOLMEDL3_W12] is oriented in the development and current state of knowledge and the latest trends in medical biology; indicates their relationship with other disciplines of natural or medical sciences	Describes the development and main directions of current research in behavioural genetics and its links with psychology and psychiatry.	[SW4] test/exam - oral or written
[BIOLMEDL3_K01] understands the need for lifelong learning and to update his/her knowledge of medical biology and related disciplines	Understands the need for lifelong learning and for keeping their knowledge of behavioural genetics up to date.	[SK1] oral statement/conversation/ discussion
[BIOLMEDL3_W02] describes the structure and properties of basic types of biological macromolecules, molecular mechanisms of the pathways of basal metabolism and flow of genetic information, and sources of variation in organisms; explains the rules of inheritance	Explains the basic principles of inheritance and the genetic sources of variation in traits and behaviour.	[SW4] test/exam - oral or written
[BIOLMEDL3_K03] is aware of his/her own limitations and knows when to seek expert assistance	Is aware of the limitations of their knowledge of behavioural genetics and knows when to consult experts.	[SK1] oral statement/conversation/ discussion
[BIOLMEDL3_K04] is able to form opinions about individuals and social groups in a professional context	Formulates opinions on the behaviour of individuals and social groups, taking genetic and environmental influences into account.	[SK1] oral statement/conversation/ discussion
[BIOLMEDL3_W11] posiada zaawansowaną wiedzę dotyczącą metod oceny stanu zdrowia oraz objawów i przyczyn wybranych zaburzeń i zmian chorobowych oraz zna podstawy zdrowego trybu życia, potrafi je uzasadnić i promować	Describes the contribution of genetic and environmental factors to the development of selected mental disorders.	[SW4] test/exam - oral or written
[BIOLMEDL3_U15] learns independently, in a focused manner	Expands their knowledge of behavioural genetics through focused, independent learning.	[SU5] implementation of a problem task

Subject contents

Theoretical foundations of behavioral genetics and research on personality development. Behavioral genetics in historical and philosophical perspective. Research methods in behavioral genetics. The contribution of genetic and environmental factors to the overall phenotypic variability of traits or behaviors. Genotypeenvironment interaction and correlation. The role of experience and learning in shaping behavior. Heritability of personality traits. Epigenetics in behavioral genetics. Experimental research on the mechanisms of personality development and behavioral genetics. Genetic studies in psychiatry and psychology. Genetic determinants of personality disorders, anxiety and stress-related disorders, addictions, and schizophrenia. Personality research molecular methods (dopamine receptor gene polymorphism, serotonin transporter gene). Research methods in behavioral genetics twin studies, family analyses, adoption method. Additive and non-additive variance. Molecular studies of temperament.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
discussions	51.0%	20.0%
quizzes	51.0%	60.0%
problem-based task	51.0%	20.0%
