

Subject card

Subject name and code	Zoology, PG_00153474						
Field of study	Medical Biology						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		3.0		
Learning profile	academic		Assessment form				
Conducting unit	Laboratory of Vertebrate Ecology and Ethology -> Department of Vertebrate Ecology and Zoology -> Faculty of Biology -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Dariusz Jakubas				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	0.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		26.0	75
Subject objectives	1 To review the major systematic groups of protozoa and animals. 2. to understand the main mechanisms and trends in the evolution of the organisms discussed. 3. to identify the basic taxa of the protozoa and animals studied. 4. to understand the basic functioning of living organisms and their interrelationships.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BIOLMEDL3_W04] presents the characteristics, systematics and evolution of selected groups of organisms including molecular basis and describes the basic concepts and mechanisms of evolution	The role, objectives and methods used in classification and systematics. Different concepts of systematic classification. Principles of modern zoological nomenclature. Classification and characterisation of the main groups of protozoa. Medical and economic importance of selected groups of protozoa. Morphology, anatomy, classification and systematics, evolution and phylogeny of invertebrates. Bionomy and economic and medical importance of selected groups of invertebrates. Characteristics, origin and main directions of the evolution of the chordates. An overview of the different systematic groups of chordates.	[SW4] test/exam - oral or written
	[BIOLMEDL3_W16] explains the theoretical basis of experimental methods and lists the most important techniques of biological sciences that can be applied to medical biology and diagnostics	explains the theoretical basis of experimental methods and lists the most important techniques of the biological sciences that can be applied to medical biology and diagnostics	[SW4] test/exam - oral or written
	[BIOLMEDL3_K01] understands the need for lifelong learning and to update his/her knowledge of medical biology and related disciplines	Awareness of the need to critically analyse knowledge, especially that obtained from the Internet	[SK4] test/exam - oral or written
	[BIOLMEDL3_W03] knows the structure of the animal or human organism, the processes and functional relationships at the cellular, tissue, organ and organismal levels, and explains their relationship to behavior and adaptation of the organism to changing environmental conditions	Morphology, anatomy, classification and systematics, evolution and phylogeny of invertebrates. Structure and evolution of systems. Aromorphoses and idioadaptations in vertebrate evolution.	[SW4] test/exam - oral or written
Subject contents	The role, objectives and methods used in classification and systematics. Different concepts of systematic division. Principles of modern zoological nomenclature. Classification and characterisation of the main groups of protozoa. Medical and economic importance of selected groups of protozoa. Morphology, anatomy, classification and systematics, evolution and phylogeny of invertebrates. Bionomy and economic and medical importance of selected groups of invertebrates. Characteristics, origin and main trends in the evolution of chordates. Basic concepts of chordates anatomy. Structure and evolution of systems. Aromorphoses and idioadaptations in vertebrate evolution. An overview of the different systematic groups of chordates.		
Prerequisites and co-requisites	Basic knowledge of animal histology is required		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	not relevant	51.0%	100.0%
