

Subject card

Subject name and code	Basics of human genetics, PG_00147016						
Field of study	Genetics and Experimental Biology						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Laboratory of Human Genomics and Genetics -> Department of Medical Biology and Genetics -> Faculty of Biology -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Anna Kloska				
	Teachers		dr Anna Kloska				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		3.0		17.0	50
Subject objectives	To familiarize students with the inheritance of genetic diseases and the principles of genetic counseling. Understanding disorders of inheritance patterns of Mendelian traits; familiarization with the use of genetic variations in individual identification. In terms of skills: teaching how to describe mutations in the human genome, estimate genetic risk and interpret results enabling prediction of an increased risk of genetically determined diseases. Familiarization with methods of conducting genetic determinations using molecular techniques.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GBEL3_U01] Independently perform practical tasks in the field of biological sciences and related disciplines, formulate research problems, analyze their results, and draw conclusions.	the graduate can perform simple practical tasks in the field of genetics human	[SU4] test/exam - oral or written [SU5] implementation of a problem task
	[GBEL3_K07] Lifelong learning and updating knowledge in the field of molecular genetics and other disciplines.	the graduate understands the need to update knowledge in the field of human genetics	[SK4] test/exam - oral or written
	[GBEL3_W01] Understanding the structure and properties of basic types of biological macromolecules, molecular mechanisms of metabolic pathways and genetic information flow, as well as sources of genetic variability in organisms and mechanisms of evolution; explaining the rules of inheritance, elucidating differences in the structure and functioning of prokaryotic and eukaryotic cells, and understanding the structure and functional relationships at the cellular and tissue levels.	the graduate describes the laws of inheritance in human genetics	[SW4] test/exam - oral or written
	[GBEL3_K06] Integrity and honesty in scientific and professional work.	The graduate understands the need for honesty and reliability in performing research field of human genetics	[SK4] test/exam - oral or written [SK8] observation of student's independent or team work
	[GBEL3_U03] Proficient in using research equipment and tools, while following the correct sequence of procedures, to conduct basic physical, biological, or chemical observations and measurements in laboratory work within the field of biological sciences.	the graduate applies the basic research equipment and tools used in human genetics and maintains and performs the correct sequence of activities and simple experiments using them	[SU8] observation of student's independent or team work
	[GBEL3_W03] The molecular mechanisms of genetic information transmission and gene expression, as well as the molecular and genetic basis of human physiology and diseases, including infectious diseases.	the graduate explains the mechanisms of human genetic diseases	[SW4] test/exam - oral or written
Subject contents	[GBEL3_K08] Responsibility for entrusted equipment/materials and respect for the work of others.		
	the graduate is responsible for the entrusted equipment/materials, his work, and respects the work of others		
Subject contents	Nomenclature of mutations in the human genome Mapping human genes by linkage analysis Clinical genetics - family history, principles of preparing a pedigree Basics of calculating the risk of a genetic disease Forensic genetics - genetic identification of individuals, kinship testing and paternity determination Genetic research as a method for tracing the history of human populations (mtDNA) Genetic identification of variants in the CCR5 gene Online databases used in human genetics		
Prerequisites and co-requisites	Basic knowledge of the genetics of organisms.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test 2	51.0%	35.0%
	lab report	51.0%	10.0%
	lab test	51.0%	20.0%
	test 1	51.0%	35.0%
