

Subject card

Subject name and code	Development and differentiation of cells and organisms, PG_00147827						
Field of study	Genetics and Experimental Biology						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr Joanna Rojek				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	- Gain knowledge of the molecular and cellular mechanisms of reproduction and development of plant organisms,- Knowledge of the processes leading to the proper development and differentiation of plant and animal cells and tissues,- The ability to correlate knowledge of the regulation of developmental processes at the molecular [(epi-) genetic] and cellular levels.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GBEL3_U04] Capable of reading scientific texts in English and Polish with comprehension, synthesizing the knowledge contained within them, preparing well-documented studies on biological issues, as well as those related to research commercialization.	Graduates are able to read with understanding scientific texts in English and Polish in the field of in the field of developmental biology, synthesizes the knowledge contained therein, prepares well-documented elaborations of biological problems, in particular concerning the development and differentiation of plant and animal cells and organisms. (GM1_U04)	[SU4] test/exam - oral or written
	[GBEL3_K07] Lifelong learning and updating knowledge in the field of molecular genetics and other disciplines.	The graduate understands the need for lifelong learning and updating knowledge of developmental biology of organisms (GM1_K07).	[SK4] test/exam - oral or written
	[GBEL3_W06] the development and current state of knowledge, as well as the latest trends in molecular genetics and related fields; indicating their relationship with other disciplines in the natural or medical sciences and the possibilities of their practical application.	The graduate is oriented in the development and current state of knowledge concerning the development and differentiation of cells and organisms and the latest trends in molecular genetics; indicates their relationship with other disciplines of natural or medical sciences and the possibilities of their use in practice (GM1_W06)	[SW4] test/exam - oral or written
Subject contents	Plant part: Molecular and cellular mechanisms of formation and differentiation of embryonic, main and lateral meristems and plant tissues. Molecular and cellular mechanisms of gametophyte, gamete, embryo and endosperm formation and differentiation. Genetic regulation of embryogenesis and seed development. The use of mutants and transgenic plants to explain the regulation of processes in plant development. Animal part: Basic mechanisms of reproduction of animal organisms. Molecular and cellular mechanisms of oogenesis; spermatogenesis and the process of fertilization; Genetic regulation of early embryonic development of <i>Drosophila melanogaster</i>; homeotic genes, homeoboxes and homeodomains; genetic regulation of <i>Caenorhabditis elegans</i> development; regulation of the formation of various tissues and organs; development of the vertebrate nervous system; genetic basis of tumorigenesis and developmental disorders. Selected examples of induction of animal cell differentiation in vitro, molecular markers of tissues and cell lines.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Attendance at lectures, written test with closed questions	51.0%	100.0%
Recommended reading	Basic literature	The lecture is an original study of the issues of molecular biology of development and differentiation of plant and animal cells based on many years of study of source literature and own research. Recommended literature: Literature - primarily in the form of published review and experimental papers - will be suggested on an ongoing basis. Scott F. Gilbert 2014, Developmental Biology, 10th Edition, Sinauer Associates, Inc., Sunderland, MA- Lodish H., Berk A, Kaiser C., Krieger M., Scott M, Bretscher A, 2007. Molecular Cell Biology. Scientific American Books, Washington, DC.- Krzanowska H, Sokół-Misiak W, 2002, Molekularne mechanizmy rozwoju zarodkowego. Wydawnictwo Naukowe PWN, Warszawa- Bielańska-Osuchowska Z, 2004, Zarys organogenezy. Wydawnictwo Naukowe PWN, Warszawa
