

Subject card

Subject name and code	Identification of cryptogamic plants - laboratory exercises, PG_00140887						
Field of study	Natural Resources Conservation						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Plant Ecology -> Faculty of Biology -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Joanna Świąta-Musznicka				
	Teachers		dr Anna Pędziszewska dr hab. Joanna Świąta-Musznicka mgr Rafał Ronowski dr Rafał Chmara				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	60.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Learning about the diversity of cryptogamic plants. To become familiar with selected representatives of the different systematic groups of cryptogamic plants. Learning to identify algae, liverworts, mosses, horsetails and ferns. Learning about cryptogamic plants protected in Poland.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OZPL3_U06] The graduate is able to make observations and perform basic physical, biological and chemical measurements in the field or laboratory	makes observations of cryptogamic plants and perform in the field or laboratory basic descriptions and measurements of organisms	[SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[OZPL3_U01] The graduate is able to use basic apparatus and research tools and maintains the correct sequence of operations in laboratory and field work	uses basic research equipment and tools to identify and collect cryptogamic plants for the preparation and identification of plants, maintains the correct sequence of operations in field and laboratory work	[SU3] text preparation/written work [SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[OZPL3_W04] The graduate possesses advanced knowledge and understanding of the characteristics, systematics, and evolution of selected groups of organisms, as well as the basic concepts and mechanisms of evolution	presents the characteristics of the main systematic groups of aquatic and terrestrial photoautotrophs and the evolution of cryptogamic plants	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[OZPL3_K06] The graduate is prepared to demonstrate responsibility for their own and others' safe working conditions in the laboratory and in the field, and is able to recognise hazardous situations and take appropriate action	demonstrates responsibility for his/her own and others' safe working conditions in the field and laboratory and is able to recognise risk situations and take appropriate action	[SK5] implementation of a problem task [SK6] demonstration of practical skills [SK8] observation of student's independent or team work
	[OZPL3_U04] The graduate is able to plan and carry out simple research tasks in the biological sciences under the guidance of a supervisor	under the guidance of a mentor, plans and carry out simple research tasks in the field of observation and recognition of cryptogamic plants	[SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[OZPL3_K02] The graduate is ready to work effectively in a team, taking on different roles within it	can work effectively in a team in a variety of roles	[SK8] observation of student's independent or team work
Subject contents	Methods of collecting and identifying cryptogamic plants for scientific and teaching purposes. Effects of habitat conditions and interspecific competition on the occurrence of plants. Cryptogamic plants in modern aquatic, marsh and terrestrial ecosystems - identifying habitats of occurrence, identifying algae, bryophytes and ferns. Bioindicative value of cryptogamic plants. Identification of protected species in Poland (classes in block form in the first part of the semester, 6 lesson hours each. Classes held in the Tricity Landscape Park, in Sopot, on the Sobieszewska Island and in Bieszkowice). Basics of the classification of cryptogamic plants from an evolutionary point of view. Characterisation of the morphological and anatomical diversity of plants based on selected organisms. Comparison of cryptogamic plant diversity and abundance in samples from aquatic, marsh and terrestrial ecosystems. Applications of cryptogamic plants in industry and medicine (class blocked after field classes).		
Prerequisites and co-requisites			

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	attendance	85.0%	0.0%
	colloquium V	51.0%	7.14%
	worksheets	51.0%	7.16%
	exercise report	51.0%	7.14%
	presentation	51.0%	7.14%
	practical pass II	51.0%	7.14%
	practical pass I	51.0%	7.14%
	practical pass III	51.0%	7.14%
	practical pass IV	51.0%	7.14%
	practical pass V	51.0%	7.16%
	colloquium IV	51.0%	7.14%
	colloquium III	51.0%	7.14%
	colloquium II	51.0%	7.14%
	colloquium I	51.0%	7.14%
	practical pass VI	51.0%	7.14%
