

Subject card

Subject name and code	Food Chemistry, PG_00081947						
Field of study	Chemistry						
Date of commencement of studies	October 2025		Academic year of realisation of subject			2026/2027	
Education level	Bachelor's studies		Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study	
Mode of study	full-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	4		ECTS credits			3.0	
Learning profile	academic		Assessment form			credit	
Conducting unit	Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Jolanta Kumirska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		22.0	75
Subject objectives	To introduce students with information about the chemical composition of food and its structure food raw materials, with particular emphasis on chemical structure and physicochemical properties and the broadly understood functions of nutrients, food additives and other compounds influencing the health quality of food products.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[CHEML3_U01] Identifies, analyses and solves problems in the field of broadly understood chemistry on the basis of the acquired knowledge.	Student discusses issues related to food chemistry. Student can explain some of the changes that occur during the storage and processing of raw materials and food products	[SU2] presentation/project/paper/report [SU3] text preparation/written work [SU8] observation of student's independent or team work
	[CHEML3_U02] Performs analyses using experimental methods and draws conclusions based on them.	Student demonstrates the ability to detect basic ingredients food, selected food contaminants and some food adulterations.	[SU2] presentation/project/paper/report [SU3] text preparation/written work [SU8] observation of student's independent or team work
	[CHEML3_U03] Selects the appropriate equipment and laboratory apparatus for conducting uncomplicated chemical experiments.	Student selects appropriate equipment and follows established procedures during analyzing the composition of raw materials for food production and the quality of food products.	[SU3] text preparation/written work [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[CHEML3_W03] Explains the relationship between the structure of matter and its observed properties.	Student knows the most important food ingredients that influence on the quality of food products. Student describes the physical, chemical and biological properties of food ingredients, food additives and food contamination.	[SW2] presentation/project/paper/report [SW3] text preparation/written work
	[CHEML3_K07] Appreciates the need for understandable presentation of selected chemical issues to the public.	Student needs further education. Student appreciates the need to present selected issues in the field of food chemistry in an accessible way.	[SK2] presentation/project/paper/report [SK8] observation of student's independent or team work
	[CHEML3_K08] Formulates opinions in the field of science with caution and criticism in their expression.	Student formulates opinions in the field of food chemistry with caution and criticism in their expression	[SK2] presentation/project/paper/report [SK8] observation of student's independent or team work
Subject contents	Laboratory:		
	A cycle of laboratory exercises concerning on consolidating knowledge and skills in the field of knowledge of the chemical composition of food and physico-chemical transformations occurring in raw materials and food products during their storage and processing.		
Prerequisites and co-requisites	lack Convergent to: organic chemistry, analytical chemistry		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	The grade will be a weighted average of the grades from the final test covering all the material laboratory exercises (40%), partial tests (40%) and reports (20%).	51.0%	100.0%
