

Subject card

Subject name and code	Chemical technology, PG_00080727						
Field of study	Chemical Business						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		1.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Laboratory of Photocatalysis -> Department of Environmental Technology -> Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Anna Gołębiewska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		8.0	25
Subject objectives	- To gain knowledge in the field of unit operations - To gain knowledge in the field of technological principles - To gain knowledge in the field of the criteria of chemical process concept design - To develop ability to prepare a schematic diagram - To gain the knowledge about selected apparatus and devises used in the chemical and food industry - To gain knowledge with selected technological processes in industry						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BCHINŻ_W06] Enumerates basic unit processes and describes issues in the field of technology and chemical engineering.	Classify operation units	[SW5] implementation of a problem task
	[BCHINŻ_W05] Describes the life cycle of devices, facilities and technical systems as well as modern environment-friendly technical solutions.	understands the concept of modern technological process design	[SW5] implementation of a problem task
	[BCHINŻ_U06] Proposes and makes simple devices, operations or unit processes related to the implementation of the technological process used in the chemical industry, taking into account material and energy balances.	1. Construct of process flow diagram 2. Classify operation units 3. Analyze mass and energy balance	[SU5] implementation of a problem task
	[BCHINŻ_U02] Uses basic methods, techniques and tools in formulating and solving engineering tasks in the field of chemistry.	Correctly solves tasks in chemical technology with elements of chemical engineering	[SU5] implementation of a problem task
	[BCHINŻ_W10] Applies safety and hygiene principles when working on a test and measurement stand or in the field.	Student is aware of the value and responsibility for health and safety rules	[SW5] implementation of a problem task
	[BCHINŻ_K02] Works individually demonstrating initiative and independence in actions, and effectively cooperates in a team, performing various roles in it.	demonstrates creativity in individual and teamwork and keeps open to the suggestions of the teacher and other team members	[SK8] observation of student's independent or team work
	[BCHINŻ_K04] Demonstrates responsibility for the safety of her/his own and others' work.	Student is aware of the value and responsibility for his/her own work results	[SK8] observation of student's independent or team work
	[BCHINŻ_W07] Describes the construction and operating principles of basic scientific, technological and control-measuring apparatus.	Design the selection of basic devices and apparatus used in chemical and food industry	[SW5] implementation of a problem task
Subject contents	Schematic diagram. Mass balance. Fluid flows. Bernulli's equation. Reynolds number. Flow resistance in pipes. Local resistance. Flow resistance through the filled layer. Centrifugal pump motor power. Processes of heat exchange/transfer/conduction, Selected computational problems of heat exchangers, Distillation. Rectification.		
Prerequisites and co-requisites	Prerequisites: Knowledge of the principles of general chemistry , math, Additional requirements: principles of the inorganic chemistry, organic chemistry and analytical chemistry		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	51.0%	50.0%
	test	51.0%	50.0%
