

Subject card

Subject name and code	Anthropogenic conversion of marine environment, PG_00103517						
Field of study	Environmental Protection						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		2.0		
Learning profile	academic		Assessment form				
Conducting unit	Laboratory of Plankton Biology -> Department of Marine Biology and Biotechnology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Agata Weydmann-Zwolicka				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Acquiring knowledge in the field of: the importance of anthropogenic activity in the functioning of various marine environments, including the pressure of human activity on individual abiotic and biotic elements of marine ecosystems; the pace of changes taking place and their possible further ecological consequences; methods of protecting marine environments and methods of increasing social pro-ecological awareness.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OŚL3_U01] Performs tasks under supervision and independently in the field of analysis of the natural environment and the functioning of natural and man-made natural systems.	Student performs tasks under supervision and independently in the field of analysis of marine environment and the functioning of natural and human-modified marine ecosystems.	[SU4] test/exam - oral or written
	[OŚL3_U10] Participates in the analyses and evaluation of alternative solutions to environmental problems and selects methods and instruments to rationally resolve them.	Student participates in analyzes and assessments of alternative solutions to problems related to the protection of the marine environment and selects appropriate methods and instruments that allow for rational resolution of them.	[SU4] test/exam - oral or written
	[OŚL3_W05] Explains the course of natural and anthropopressional physical, chemical and biological processes and phenomena occurring in nature at various levels of matter organisation.	Student explains at an advanced level the course of natural and anthropogenic physical, chemical and biological processes and phenomena occurring in the marine environment at various levels of matter organization.	[SW4] test/exam - oral or written
	[OŚL3_K05] Identifies the level of her/his knowledge and skills, demonstrates the need to update knowledge about the environment and its protection, demonstrates the need for continuous professional training and personal development.	Student identifies the level of knowledge and skills regarding the impact of anthropogenic pressure on marine environment, as well as demonstrates the need to update knowledge about marine environment and its protection, and for continuous professional education and personal development.	[SK4] test/exam - oral or written
	[OŚL3_U04] Uses specialist language in the discussion and properly uses the nomenclature in the field of environmental protection and individual disciplines related to it.	Student uses specialized language in the discussion and properly uses scientific nomenclature in the field of marine environment protection and other disciplines related to it.	[SU4] test/exam - oral or written
	[OŚL3_W01] Discusses the basic concepts of mathematics, physics, chemistry and biology. Describes physical, chemical and biological phenomena occurring in nature as well as geological, geomorphological and climatic conditions of the functioning of nature.	Student discusses at an advanced level the concepts of physics, chemistry and marine biology, describes the physical, chemical and biological phenomena occurring in marine environment and atmosphere, as well as the impact of climatic conditions on the functioning of marine ecosystems.	[SW4] test/exam - oral or written
	[OŚL3_W06] Characterises levels of life organization, biodiversity and the interaction of organisms and the environment.	Student characterizes the levels of organization of life in seas and oceans, biodiversity and the interactions of organisms and marine environment.	[SW4] test/exam - oral or written
	[OŚL3_W07] Explains the causal relationship between the content of specific pollutants and the state of the environment (including human health) and the occurrence of adverse phenomena on a local, regional and global scale.	Student explains at an advanced level the cause and effect relationships between the content of specific pollutants and the state of the marine environment and the occurrence of phenomena of anthropogenic origin on a local, regional and global scale.	[SW4] test/exam - oral or written
Subject contents	1. Changes in marine ecosystems on a micro- and macroscale as a result of human activity - historical outline.2. The impact of anthropogenic pressure on changes in the marine environment on a local scale (e.g. economic, scientific, military activities).2. The impact of climate change and related phenomena on the coastal zone and the functioning of marine ecosystems, with particular emphasis on the polar regions.3. The impact of increasing eutrophication: dynamics of short- and long-term changes on the example of the Baltic Sea.4. Changes in marine ecosystems under the influence of natural factors, changes in the range of species, cases of mass mortality in the sea, mass appearances of jellyfish.5. Human impact on marine ecosystems on a local scale: invasive species, introduction of new species, pathogens and strains.6. Use of marine living resources (fishing, whaling, breeding); the problem of overfishing.7. Pollutants: organic, inorganic, heavy metals; chemical weapon.8. Problems related to plastic and microplastics in the sea.9. Structures on the bottom, transformation of the shore, wind farms.10. The biggest maritime ecological disasters.11. Forecasts and scenarios of changes in particularly sensitive ecosystems on the example of the polar regions and the Baltic Sea.		

Prerequisites and co-requisites	At least 80% attendance at classes.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	51.0%	80.0%
	Attendance at classes	80.0%	20.0%

		eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	1. Discuss the impact of ongoing climate change on marine ecosystems. 2. How can we reduce the input of plastic and microplastics into the marine environment? 3. What alien species have been introduced to the Baltic Sea? 4. What is the impact of eutrophication on marine ecosystems, using the example of the Baltic Sea?		
Work placement	Not applicable
