

Subject card

Subject name and code	Operating Systems, PG_00143996						
Field of study	Informatics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		6.0		
Learning profile	practical		Assessment form		exam		
Conducting unit	Institute of Informatics -> Faculty of Mathematics, Physics and Informatics -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		mgr Łukasz Mielewczyk				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		0.0		90.0	150
Subject objectives	The purpose of the course is to familiarize students with the principles of operation and methods of operating systems and the basics of system programming.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[INFL3_W06] has knowledge of operating systems, network technologies including basic web communication protocols	knows the commands that are used to execute system commands, the most important elements, related to the architecture of computer systems and the principles of the operating system	[SW4] test/exam - oral or written
	[INFL3_K01] knows the limitations of their own knowledge and understands the need for further education	is able to use online documentation and tools, the Linux operating system for help and documentation on other commands and programs	[SK4] test/exam - oral or written
	[INFL3_U05] uses advanced functionalities of operating systems, in particular related to network aspects, virtualization, containerization and other cloud technologies	can use the Linux operating system from the command line and graphical interface	[SU4] test/exam - oral or written
	[INFL3_U02] is able to obtain information from literature, knowledge bases, the Internet and other reliable sources, integrate them, interpret them and draw conclusions and formulate opinions	is able to use online documentation and tools, the Linux operating system for help and documentation on other commands and programs	[SU4] test/exam - oral or written
	[INFL3_K02] can precisely formulate questions to deepen his/her own understanding of a given topic or to find missing elements of reasoning	is able to use online documentation and tools, the Linux operating system for help and documentation on other commands and programs	[SK4] test/exam - oral or written
Subject contents			
- Popular operating systems: features, types, organization, architecture, structure, operation, interoperability - Examples of components and tools offered by operating systems. - File systems: examples of file systems, file types, access methods, system directory structure, and the basics of file system management. - Shells: examples of shells, startup files, environment variables, command interpreters, and scripting. - Fundamentals of system administration: managing user accounts and authorization, logging, and tools for monitoring and managing events. - Management of computer system components: processor operation, computer memory and storage management, computer system startup. - Processes and threads: the concept of a process, process behavior, interprocess communication, thread management, synchronization methods, and example problems. - Resource management: process and thread scheduling, deadlocks, and other example problems. - Fundamentals of systems programming: resource management, fundamentals of concurrent programming. - Security and Safety: principles of operating system and computer system security, techniques for attacking operating systems, and malware attack techniques. - Virtualization: virtualization techniques and how hypervisors work.			
Prerequisites and co-requisites			
Passing the subjects: Wstęp do programowania (Introduction to programming), Warsztat programisty (Programmer's workshop). Ability to use a command interpreter and basic knowledge of Python programming.			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture: exam	51.0%	50.0%
	Laboratory exercises: tests	51.0%	50.0%
