

Subject card

Subject name and code	Seminar II - Experimental publications in molecular biology and biotechnology 2, PG_00153631						
Field of study	Biotechnology						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Intercollegiate Faculty of Biotechnology UG-MUG -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Andrea Lipińska				
	Teachers		dr Marta Krychowiak-Maśnicka dr Anna Kawiak prof. dr hab. Jarosław Marszałek dr hab. Kamila Kitowska dr hab. Magdalena Weidner-Glunde				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	0.0	30.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		65.0	100
Subject objectives	Depending on the specific series of publications under discussion, seminar participants should have factual and methodological knowledge of the specific research question. Seminar participants should be able to discuss the results of published research based on reading the text of the publication and presenting the results in the form of figures and tables. They should be able to briefly and logically present the results of individual experiments. They should be able to critically discuss published results and ask questions about their significance.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BIOTECHMU2_U07] The graduate is able to prepare and present in Polish and/or English an oral presentation covering detailed issues in the field of biotechnology using scientific language, including specialist terminology and conceptual apparatus; conduct discussions.	Be able to prepare and present an oral presentation in Polish and/or English covering specific topics in biotechnology using scientific language including specialised terminology and terminology; has the ability to hold a discussion.	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[BIOTECHMU2_U06] The graduate is able to prepare, in a targeted manner in Polish and / or English, a written study, a scientific publication in the field of biotechnology using scientific language, including specialist terminology and conceptual apparatus.	Can prepare in a targeted manner, in Polish and/or English, a written scientific publication on biotechnology using scientific language including specialised terminology and terminology.	[SU3] text preparation/written work
	[BIOTECHMU2_U05] The graduate has proficient knowledge of English to understand statements and read and understand literature and scientific studies in the fields of science and scientific disciplines relevant to biotechnology; is able to prepare a written study and an oral presentation in English.	Has sufficient command of the English language to be able to understand and read with comprehension the literature and scientific papers in the fields of science and disciplines relevant to biotechnology; is able to prepare a short written paper and an oral presentation in English	[SU2] presentation/project/paper/report
	[BIOTECHMU2_U04] The graduate possesses the ability to proficiently use scientific information, including English, regarding biotechnology; critically analyses and selects information; uses electronic sources; has the ability to use appropriate databases.	Is proficient in the use of scientific information, including English-language information on biotechnology; critically analyses and selects information; uses electronic sources; has the ability to use appropriate databases	[SU2] presentation/project/paper/report
Subject contents	The publications discussed in the seminar concern contemporary biomedical research conducted using molecular, biochemical, biophysical and genetic techniques. The publications discussed represent a logical sequence of research on a particular problem. They include both the 'classic' papers, which initiated a particular line of research, and contemporary publications showing which research techniques are used today. The publications discussed are selected by the lecturer to cover the widest possible range of research techniques. The topics covered in the classes depend on the scientific interests and research undertaken by the teacher.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Activity in class	0.0%	20.0%
	Presentation	0.0%	80.0%
Recommended reading	Basic literature	The instructor prepares a list of about 10 publications and makes them available to the students in the first class. At the same time, students are provided with a bibliography of available review articles, which they are expected to obtain and read on their own in order to familiarise themselves with the broader context of the research discussed in the seminar. The instructor encourages the students to carry out their own bibliographic searches by providing them with keywords related to the topics discussed in the seminar.	
	Supplementary literature	None	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
