

Subject card

Subject name and code	Business Forecasting, PG_00174110						
Field of study	Logistics and Mobility						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Logistics -> Faculty of Economics -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Beata Chmiel				
	Teachers		dr Beata Chmiel				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		15.0		20.0	50
Subject objectives	The aim of the subject is to acquaint students with forecasting methods used in an enterprise and to acquire practical skills in their application.						
	In addition, the aim of the subject is to acquaint students with the possibilities of using the Statistica program for business forecasting.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[LMMU2_K02] is aware of the level of his/her knowledge in the field of logistics and mobility; understands the need to extend and update this knowledge throughout his/her life	The student is aware of the level of her/his knowledge of business forecasting; understands the need to expand and update this knowledge throughout her/his life.	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK8] observation of student's independent or team work
	[LMMU2_U04] can forecast and model complex economic and social processes, as well as logistics and mobility processes and systems using quantitative and qualitative methods and tools developed by economic sciences (including statistics and econometrics)	The student student is able to forecast complex economic processes using quantitative and qualitative methods and tools developed by economic sciences (including statistics and econometrics).	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	[LMMU2_K05] correctly identifies, diagnoses and solves dilemmas and alternative solutions related to the profession	The student correctly identifies, diagnoses and solves dilemmas and alternatives related to the business forecasting.	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK8] observation of student's independent or team work
	[LMMU2_K01] recognises the importance of knowledge in the field of logistics and mobility in the process of identifying and solving work-related problems and of consulting experts when having difficulties in solving them independently	The student recognizes the importance of knowledge of business forecasting in the process of identifying and solving work-related problems and consulting experts in case of difficulties in solving them independently.	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK8] observation of student's independent or team work
	[LMMU2_U02] can use acquired knowledge to describe and analyse the causes and course of logistics and mobility processes and systems, and can formulate his/her own opinions and critically select data and analysis methods based on the achievements of economic and social sciences	The student is able to select and apply quantitative and qualitative methods and tools developed by the economic sciences, including advanced IT tools.	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	[LMMU2_W06] knows statistical and econometric methods and tools for description and macro- and microeconomic modelling of logistics and mobility processes and systems	The student knows and understands the methods and tools for describing economic processes and systems, enabling the construction of a forecasting model.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[LMMU2_U07] can independently propose solutions to complex logistics and mobility problems, select methods of analysis and conduct conclusive procedures in this respect	The student is able to independently propose solutions to complex problems, select methods of analysis and carry out conclusive procedures in this regard.	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	[LMMU2_U13] can manage teamwork as well as interact and work in a team (including in an international environment) assuming a leading role in it	The student is able to work in a team, taking a leading role in it.	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	[LMMU2_W03] has an in-depth knowledge of relations between economic entities and organisations functioning in the national, international and intercultural spheres; understands importance logistics and mobility for their operation	The student knows and understands the importance of forecasting in the management of a business entity.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion

Subject contents	1) Introduction to the Statistica package Documents in Statistica, worksheet elements, variable specification window, program modules, importing data from another application, data validation, creating subsets, creating own worksheet 2) The essence of forecasting Definitions of forecast and forecasting, functions and classifications of forecasts, parameters of the evaluation of forecasting quality, costs of forecasting 3) Forecasting methods Time series models (trend estimation, adaptive models), cause-effect econometric model, brain storming, Delphi method, surveys, scenario building, forecasts by analogy Any doubts regarding the issues discussed will be dispelled during the consultation.		
Prerequisites and co-requisites	Knowledge of the nature of the econometric model and the skills to apply it in selected areas.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Assessment test	51.0%	100.0%
	Active participation in classes (extra points possible)	0.0%	0.0%
