

Subject card

Subject name and code	Data processing, PG_00135485						
Field of study	Physical geography and geoinformation						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		2.0		
Learning profile	academic		Assessment form				
Conducting unit	Laboratory of Geomorphological Reconstructions -> Department of Geomorphology and Quaternary Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Maurycy Żarczyński				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		15.0		15.0	60
Subject objectives	1. Familiarization with basics of the R language and methods of data processing; 2. Familiarization with ETL (Extract, Load, Transformation) tools on example of FME. Rules for model creation, data processing and data manipulation processes automatization.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GFGMU2_U03] effectively use selected scientific literature in the field of physical geography and geoinformation, both in Polish and English	Can choose appropriate statistical method based on the literature.	[SU2] presentation/project/paper/report
	[GFGMU2_K03] accepting responsibility for group work assuming various roles in it, participating in preparation of scientific projects, taking responsibility for the equipment and safety rules, active developing of professional competences and knowledge in Earth and environmental sciences and geoinformation, including interdisciplinarity, as well as developing the principles of professional ethics, respecting copyright rules	Exhibits ability to work in a group.	[SK2] presentation/project/paper/report [SK8] observation of student's independent or team work
	[GFGMU2_K01] critical assessment of knowledge in the field of Earth and environmental sciences and geoinformation, its completion and verification through critical analysis of scientific literature	Exhibits critical perception of their achievements.	[SK2] presentation/project/paper/report
	[GFGMU2_U04] describe and analyze the causes and course of physical and geographical processes and phenomena, selecting and applying advanced techniques and research tools in the field of statistical and geoinformation methods, interpreting the results, using theoretical knowledge to formulate own opinions and conclusions	Can carry statistical and spatial analysis of spatial and numeric data.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written
	[GFGMU2_W04] theoretical foundations of research methods used in physical geography and closely related sciences, descriptive and mathematical statistics, as well as advanced methods of analyzing spatial phenomena	Knows statistical methods used in analyses of the environmental data.	[SW4] test/exam - oral or written
	[GFGMU2_U02] precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Can prepare a work using specialist language used in physical geography and geoinformatics.	[SU2] presentation/project/paper/report
Subject contents	1. Introduction to R language and RStudio environment; 2. Data input and import (text data, tabular data and spatial data); 3. Data cleaning (tidyr, dplyr and other); 4. Basics programming in R language; 5. Indexing, loops, functions; 6. Data preparation and processing, basic statistical modeling approaches; 7. Model assessment procedures (model appraisal, cross-validation, bootstrapping); 8. Practical use of selected statistical methods; 9. Introduction and familiarization with basic functions of the ETL tool FME (Feature Manipulation Engine) by SAFE Software; 10. Integration of the various spatial data types as an example of batch data transformation process into single output; 11. Automatization of the data processing using variable data sources (raster, vector, tabular) with geometry and attributes manipulation with the FME Workbench.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Term work (R)	51.0%	46.66%
	Term works (FME)	51.0%	23.34%
	Test	51.0%	30.0%
