

Subject card

Subject name and code	Coastal zone dynamics, PG_00135504						
Field of study	Physical geography and geoinformation						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Laboratory of Geomorphological Reconstructions -> Department of Geomorphology and Quaternary Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Patryk Sitkiewicz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		15.0		30.0	60
Subject objectives	1. Presentation of the hydrodynamic and geological conditions of the variability of the coastal zone 2. Familiarization with geomorphological processes occurring in the coastal zone 3. Determining the role of human activity in shaping the dynamics of the coastal zone 4. Presentation of natural hazards occurring in the coastal zone						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GFGMU2_K01] critical assessment of knowledge in the field of Earth and environmental sciences and geoinformation, its completion and verification through critical analysis of scientific literature	The student is ready to assess his knowledge of coastal geomorphology critically, supplement it, and verify it by critically reading the literature on the subject.	[SK1] oral statement/conversation/discussion [SK3] text preparation/written work
	[GFGMU2_U05] integrate knowledge from the discipline of Earth and environmental sciences, explaining and interpreting the interrelationships between environmental processes and phenomena in order to solve research problems in physical geography and geoinformation	Can integrate knowledge in the field of coastal sciences, correctly explaining and interpreting the mutual relations between processes and phenomena occurring in the coastal zone of seas and oceans.	[SU1] oral statement/conversation/discussion [SU3] text preparation/written work
	[GFGMU2_W01] the specificity of Earth sciences in the field of physical geography, its internal structure, research subject and main research directions, conceptual apparatus, as well as practical applications of scientific achievements	Knows and understands the subject of research, the main research directions, the conceptual apparatus of coastal geomorphology, and the practical applications of scientific research in this field.	[SW3] text preparation/written work
	[GFGMU2_W02] issues in the field of exact sciences enabling the understanding of complex processes and phenomena occurring in the Earth's natural environment, and in their interpretations consistently rely on empirical foundations, using qualitative and quantitative methods	Knows the physical basis of dynamic processes, and their interpretation is consistently based on empirical foundations using qualitative and quantitative methods.	[SW3] text preparation/written work
	[GFGMU2_W08] the most important contemporary problems on a regional and global scale, their essence, genesis and possible consequences	Knows and understands the processes occurring in the coastal zone of seas and oceans at various spatial scales, as well as their essence, genesis, and possible consequences.	[SW1] oral statement/conversation/discussion [SW3] text preparation/written work
	[GFGMU2_U02] precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Can fluently and appropriately use terminology related to processes and forms occurring in the coastal zone in written work.	[SU1] oral statement/conversation/discussion [SU3] text preparation/written work
	[GFGMU2_U03] effectively use selected scientific literature in the field of physical geography and geoinformation, both in Polish and English	Can effectively use scientific literature in research on the coastal zone of seas and oceans, both in Polish and English.	[SU3] text preparation/written work
Subject contents	1. Current and future problems related to the management of the coastal zone. 2. Intentional and unintentional human impact on the coastal morphodynamics. 3. Selected examples of investments located in coastal zones. 4. Natural hazards in coastal zones.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	dissertation	51.0%	60.0%
	presentation	51.0%	30.0%
	activity in classes	51.0%	10.0%
