

Subject card

Subject name and code	Introduction to seabed morphometry - laboratory exercises, PG_00054569						
Field of study	Oceanography						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		1.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Geophysics -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Dominik Pałgan				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		5.0		15.0	35
Subject objectives	To know and understand methods for processing bathymetric data and quantitative and qualitative description of seabed morphometry.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	is able to analyse analytically and synthesise the results of seabed morphometric analyses and make correct inferences from these (content: B.1-B.4)	[SU3] text preparation/written work [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[OCEANMU2-W01] knows and understands in-depth specialized terminology used in oceanography and related sciences (in Polish and a selected foreign language)	has a thorough understanding of specialistic terminology relevant to the description of the seabed morphometry (in Polish and a selected foreign language) (content: B.1-B.4)	[SW3] text preparation/written work [SW5] implementation of a problem task
	[OCEANMU2-W02] knows and understands complex processes and phenomena occurring in the marine environment, with particular emphasis on the coastal zone, as well as complex relationships between living and non-living elements of the aquatic environment	have a thorough understanding of complex seabed processes and phenomena taking place on the seabed, including the coastal area, and the complex interrelationship between living and non-living elements of the seabed environment - based on analysis of seabed morphometrics (B.1-B.4)	[SW3] text preparation/written work [SW5] implementation of a problem task
	[OCEANMU2-W05] knows and understands the principles of planning and conducting field and laboratory research as well as advanced methods and tools of scientific research, especially in the field of the studied specialty	has an in-depth knowledge and understanding of the principles of planning and conducting field and laboratory investigations and of advanced scientific research methods, and tools in seabed morphometry (content: B.1-B.4)	[SW3] text preparation/written work [SW5] implementation of a problem task
	[OCEANMU2-U06] can use specialized computer software and advanced mathematical and statistical methods in data analysis and description of processes and phenomena occurring in the marine environment and coastal zone	is able to use specialised computer software and advanced mathematical and statistical methods in the analysis of bathymetric data (content: B.1-B.4)	[SU3] text preparation/written work [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[OCEANMU2-W03] knows and understands research methods used in oceanography and related sciences	has a thorough understanding of research methods and the latest trends in non-invasive seabed surveying and morphometric analysis (content: B.4)	[SW3] text preparation/written work [SW5] implementation of a problem task
Subject contents	B.1 Practical aspects of the interpolation and production of the Numerical Terrain Model.B.2. Practical interpretation of the statistical features of the Numerical Terrain Model.B.3 Application of numerical image analysis to depictions of bottom morphology.B.4. Learn the principles of classification of morphological features and sediment types from non-invasive seabed recordings.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Completion of writing assignments	51.0%	100.0%
