

Subject card

Subject name and code	MSc laboratory course, PG_00051254						
Field of study	Chemistry						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2027/2028		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		10.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Joanna Makowska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	180.0	0.0	0.0	180
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	180		30.0		40.0	250
Subject objectives	Planning and performance of experimental research project by each student working under the control / guidance of supervisor.						
	Presentation of obtained research results in the form of written master thesis						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[CHEMMU2_W02] Has extended and in-depth knowledge in the field of basic chemistry.	basic computational techniques in chemistry, - performs basic chemical calculations, taking into account basic chemical and gas laws, stoichiometry and concentrations of solutions, - Student knows how to read information from the periodic table, - based on the position of an element in the periodic table, determines its structure and characterizes its properties, - Student balances the equations of chemical reactions,	[SW4] test/exam - oral or written
	[CHEMMU2_W14] Explains concepts and principles in the field of industrial property and copyright protection and recalls knowledge about the management of intellectual property resources; is able to use patent information.	- Student knows the basic concepts and principles related to the protection of intellectual property. Knows the principles of copyright law, patent law, trademark law, industrial design law, and trade secret law	[SW4] test/exam - oral or written
	[CHEMMU2_K05] Understands the need for independent search of information in scientific literature and popular science magazines.	Student: works independently correctly defines priorities necessary for realization of her/his own aims cares for safety during own-self realization of chemical experiments takes into account the made arrangements for realization of experiments.	[SK5] implementation of a problem task
	[CHEMMU2_W12] Knows the principles of occupational health and safety to the extent that allows independent work on a research and/or measurement position.	student understands the need to exercise due caution when using laboratory equipment and working with chemical reagents; - The student knows the applicable regulations and guidelines regarding occupational health and safety in his field. He is aware of how to prevent accidents and knows the appropriate equipment for his workstation	[SW4] test/exam - oral or written
	[CHEMMU2_W13] Demonstrates knowledge of legal and ethical conditions related to scientific and didactic work.	- student knows the basic concepts and principles related to the protection of intellectual property. Knows the principles of copyright law, patent law, trademark law, industrial design law, and trade secret law -student is aware of the consequences of overusing artificial intelligence tools in research and teaching work.	[SW4] test/exam - oral or written [SW1] oral statement/ conversation/discussion
	[CHEMMU2_U07] Defines and implements the directions of own further education.	Student is able to self-assess Student is able to define his/her educational goals. Prepares an action plan that will take into account time, resources and specific steps to achieve research goals (courses, training, internships)	[SU5] implementation of a problem task
	[CHEMMU2_W10] Uses knowledge of the principles of operation of the basic scientific and research apparatus used in chemistry.	Student: names and describes methods of analysis and/or methods of computer theoretical calculations used during realization of master project distinguishes and characterizes individual experimental/ IT techniques used during realization of research project identifies scientific and research apparatuses used during realization of research project and explains the principles of their operations.	[SW1] oral statement/ conversation/discussion [SW2] presentation/project/paper/ report

	Course outcome	Subject outcome	Method of verification
	[CHEMMU2_W09] Classifies specialist IT tools used in statistical evaluation of experiment results.	Student: names and describes methods of analysis and/or methods of computer theoretical calculations used during realization of master project distinguishes and characterizes individual experimental/ IT techniques used during realization of research project identifies scientific and research apparatuses used during realization of research project and explains the principles of their operations.	[SW2] presentation/project/paper/report
	[CHEMMU2_U10] Reads with understanding scientific and popular science chemical texts in English.	Student: performs scheduled experiments, makes observations analyzes the obtained results and compares them with available literature data draws conclusions from the conducted tests and proves their correctness in based on available literature data presents the same content in a different language convention systematically collects and prepares documentation of her/his research work.	[SU2] presentation/project/paper/report [SU3] text preparation/written work
Subject contents	The program content is varied and depends on the scope of the topic of the master thesis		
Prerequisites and co-requisites	Knowledge of general, inorganic, and organic chemistry, biochemistry, and mathematics at the first-cycle education. Knowledge of basic issues in the field of quantum chemistry, chemometrics and/or related scientific fields. Specific knowledge and skills in programming in Python and/or R.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Preparation and presentation of several speeches covering research topics carried out in the laboratory	100.0%	100.0%
Recommended reading	Basic literature	Literature required to pass the course A.1. Literature used during classes: Specialist literature in the scope of realized master thesis. The scope of literature is corrected and still adopted to conducted master research topics A.2. Literature for individual studies: Specialist literature in the scope of realized master thesis. The scope of literature is corrected and still adopted to conducted master research topics	

	Supplementary literature	Extracurricular readings
		Specialist literature in the scope of realized master thesis. The scope of literature is corrected and still adopted to conducted master research topics
	eResources addresses	
Example issues/ example questions/ tasks being completed		
Work placement	Not applicable
