

Subject card

Subject name and code	Software Testing, PG_00178068						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2028/2029		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			5.0		
Learning profile	academic	Assessment form			credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr Dariusz Krlewski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	45.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		4.0		61.0	125
Subject objectives	<ul style="list-style-type: none"> Familiarisation with application testing techniques, tools and processes Practical implementation of tests Ability to assess the selection of testing tools/techniques for specific needs and their appropriate application Practical learning of the test documentation creation process 						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[liEL3_W06] To an advanced degree, the student knows and understands the processes and methods of creating, developing, and providing appropriate conditions for using informatics or statistics tools, particularly those that improve human and organizational functioning.		Student: - distinguishes between different levels of testing - characterises different types of testing - learns about good practices in application testing.			[SW4] test/exam - oral or written	
	[liEL3_U12] The student can design and implement IT systems to enhance business operations and effectively utilize modern ICT technologies for management and business communication.		Student: - is able to identify the objectives and needs of testing for a selected application - is able to conduct an exploratory testing session - is able to conduct a usability testing session - is able to create test documentation - plans elements of the testing process - analyses individual test cases in terms of selecting appropriate actions in the area of application testing			[SU5] implementation of a problem task [SU6] demonstration of practical skills	

Subject contents	<p>Lecture topics</p> <ol style="list-style-type: none"> 1. Fundamentals of testing <ul style="list-style-type: none"> • Why testing is necessary • What is testing? • General principles of testing • Basic testing process • Psychology of testing 2. Testing in the software life cycle <ul style="list-style-type: none"> • Software development models • Test levels • Types of tests • Maintenance testing 3. Static testing techniques <ul style="list-style-type: none"> • Static techniques and the testing process • Review process • Static analysis using tools 4. Test design techniques <ul style="list-style-type: none"> • Test development process • Categories of test design techniques • Specification-based or black-box techniques • Structure-based or white-box techniques • Experience-based techniques • Selection of testing techniques 5. Test management <ul style="list-style-type: none"> • Test organisation • Test planning and estimation • Test progress monitoring and supervision • Configuration management • Risk and testing • Incident management 6. Tool-assisted testing <ul style="list-style-type: none"> • Types of testing tools • Effective use of tools, potential benefits and risks • Implementing tools in an organisation <p>Issues covered in exercises / seminars / laboratories</p> <ol style="list-style-type: none"> 1. Unit tests <ul style="list-style-type: none"> • Test-driven development • Manual tests • Testing costs • Test pyramid • Unit test frameworks • NUnit in Visual Studio • Characteristics of good unit tests • Test naming and organisation • Basic unit testing techniques • Creating reliable tests • Testing methods that return a value • Testing non-returning methods • Testing methods that return an exception • Testing methods that trigger events • Testing private methods 2. Integration tests <ul style="list-style-type: none"> • Dependency Injection • Ways to loosen code • DI frameworks • Dummies • Mock frameworks 3. Test process automation. <ul style="list-style-type: none"> • Selenium • Cypress 4. Creating test documentation. 5. Conducting exploratory testing sessions. 6. Conducting usability testing sessions. 7. Familiarisation with the work of a software tester in the following contexts: agile teams, security testing, automated test design. 											
Prerequisites and co-requisites	Basic knowledge of programming and computer software											
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Subject passing criteria</th> <th style="width: 25%;">Passing threshold</th> <th style="width: 25%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Completion of a final project – independent solution of a practical problem in a given field (e.g. business) using the software and methods learned during the course.</td> <td style="text-align: center;">50.0%</td> <td style="text-align: center;">60.0%</td> </tr> <tr> <td>Examination in the form of a test</td> <td style="text-align: center;">50.0%</td> <td style="text-align: center;">40.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Completion of a final project – independent solution of a practical problem in a given field (e.g. business) using the software and methods learned during the course.	50.0%	60.0%	Examination in the form of a test	50.0%	40.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Completion of a final project – independent solution of a practical problem in a given field (e.g. business) using the software and methods learned during the course.	50.0%	60.0%										
Examination in the form of a test	50.0%	40.0%
