University of Gdańsk

Subject card

Subject name and code	Implementing Big Data Solutions, PG_00177527		
Field of study	Informatics and Econometrics		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2027/2028
Education level	Master's studies	Subject group	Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	4	ECTS credits	5.0
Learning profile	academic	Assessment form	exam
Conducting unit	Department of Business Informatics -> Faculty of Management -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Patrycja Krauze-Maślankowska	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	45.0	0.0	0.0	60

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	60	4.0	61.0	125

Subject objectives

Familiarizing students with a comprehensive approach to acquiring and processing large data sets.Preparing students to create Big Data solutions.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[IiEMU2_U11] The student can collaborate effectively in teams and assume leadership roles.	use advanced types of large databases	[SU2] presentation/project/paper/ report
[IiEMU2_W05] The student possesses advanced knowledge and understanding of informatics, statistics, and econometrics techniques and tools used to acquire, process, or visualise data to aid in decision-making and verify research hypotheses.	understands the purpose of creating and using Big Data systems	[SW4] test/exam - oral or written
[IiEMU2_U03] The student is able to obtain and verify data from properly selected sources and to collect, process, and visualize it using modern econometrics, informatics or statistics tools.	designs web scraping scripts and open data retrieval	[SU2] presentation/project/paper/ report

Subject contents	LectureIntroduction to Big Data, types of data, data division, classifications and technologiesWeb scraping techniques, generic and dedicated web scraping, legal conditions of web scrapingNoSQL databases - collections and documents - creating, saving and downloading dataOverview of Big Data analytical tools, libraries supporting data processingApache Hadoop ecosystemPractical application of Data Mining, Text Mining, Web MiningSupervised and unsupervised machine learningExercisesWeb scraping methods - using the Python language to automatically download data from the InternetMachine learning methods - supervised and unsupervised learning, using text and numeric setsText mining methods - automatic extraction of valuable information from text setsCollecting large data sets - NoSQL databases, saving the content of websites, creating and selecting queriesWorking with Open Data data, using APIsProcessing data from various file formats - JSON, CSV and XMLProcessing large sets data in Apache Hadoop and Apache Spark - PySpark application, MapReduce algorithms: WordCount analysis, HDFS - Hadoop Distributed File SystemApplications dedicated to web scrapingCase studies of Big Data solutions implementation
Prerequisites and co-requisites	Familiarizing students with a comprehensive approach to acquiring and processing large data sets.Preparing students to create Big Data solutions.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Student activity during classes	51.0%	10.0%
Project - Big Data solutions	51.0%	60.0%
Exam - test	51.0%	30.0%
