University of Gdańsk

Subject card

Subject name and code	Experimental medicine, PG_00192261		
Field of study	Biotechnology		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2027/2028
Education level	Master's studies	Subject group	Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	English
Semester of study	3	ECTS credits	2.0
Learning profile	academic	Assessment form	credit
Conducting unit			
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Aleksandra Markiewicz	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	0.0	0.0	30.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	5.0	15.0	50

Subject objectives

The aim of the course is to familiarize students with the research approach in the analysis and validation of molecular markers potentially useful in clinical practice.

During classes, the student will:

- demonstrate knowledge of research models used to characterize biological and clinical significance of a molecular marker, terminology and conceptual apparatus for molecular diagnostics, precision medicine

- acquire competences enabling planning of a research path aimed at demonstrating the biological significance and clinical utility of a molecular marker in precision medicine.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[BIOTECHMU2_W03] The graduate has in-depth, specialized knowledge of therapy and diagnostic methods of human diseases, including the mechanisms of action of selected drugs, immunotherapy, cellular and gene therapy, understanding the ethical, legal and social dilemmas involved and being able to evaluate them from the perspective of the patient's well-being and the public interest.	The student understands the relationship between the disorder of a given type of molecular marker and the possibilities of using it e.g. in targeted therapy or as a prognostic and predictive marker. Is able to design an experiment aimed at validating the usefulness of a molecular marker	[SW2] presentation/project/paper/ report
[BIOTECHMU2_W01] The graduate has in-depth knowledge of complex biological phenomena at the molecular level and knows their importance for biotechnology, is able to analyze them in an interdisciplinary approach and assess their ethical, social and environmental implications.	The student understands the relationship between the disturbance of the level of a molecular marker and the possibility of using this fact, e.g. to detect diseases and monitoring their course.	[SW4] test/exam - oral or written

Subject contents

1. Types of molecular markers.2. Research tools for the analysis of cells, RNA, DNA and protein.3. Preparation of samples for analysis.4. Methodology of working with clinical material.5. Research using in vitro tests.6. Research using animal models.7. Clinical trials.8. Assessment of the usefulness of molecular markers in medicine.9. Analysis of molecular test results.10. Statistical analysis.11. Molecular marker in medicine - the path from the laboratory to the patient.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Final exam - test and open questions	51.0%	80.0%
Presentation of a research task by the student	51.0%	20.0%
