University of Gdańsk

Subject card

Subject name and code	Principles of biotechnology - The Cell Methodology (M01_B3), PG_00193183		
Field of study	Biotechnology		
Date of commencement of studies	October 2025	Academic year of realisation of subject	2025/2026
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	2.0
Learning profile	academic	Assessment form	credit
Conducting unit			
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Stanisław Ołdziej	
	Teachers	dr hab. Stanisław Ołdziej prof. dr hab. Aleksandra Królicka mgr Robert Wenta mgr Marcin Borowicz dr Anna Ihnatowicz	

Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	26.0	0.0	0.0	0.0	26
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	26	10.0	20.0	56

Subject objectives	The purpose of the class is to familiarize the student with the structure and functioning of the cell as the basic unit of life. During the course of the course, the Student will gain detailed knowledge of the organization of the structure of the prokaryotic cell, the animal eukaryotic cell, and the plant and fungal eukaryotic cell . The student will become familiar with the legal regulations related to working with a biological agent, learn the basic techniques and research tools used in cell biology to observe and analyze the functioning of cells and their components . The student will be able to indicate the differences in the structure of different types of cells, will be able to indicate the distinguishing features of cells of given types of organisms and the features common to the discussed types of cells.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[BIOTECHL3_W07] The graduate has advanced knowlegde of the rules of operation and the possibilities of using research techniques and tools used in biotechnology.	The student will become familiar with the legal regulations related to working with a biological agent, learn the basic techniques and research tools used in cell biology to observe and analyze the functioning of cells and their components	[SW4] test/exam - oral or written
[BIOTECHL3_W02] The graduate knows and understands at an advanced level selected processes at the cell, tissue and organism level, important from the biological point of view	Student will gain detailed knowledge of the organization of the structure of the prokaryotic cell, the animal eukaryotic cell, and the plant and fungal eukaryotic cell	[SW4] test/exam - oral or written
[BIOTECHL3_U08] The graduate is able to learn independently and in a targeted manner, develop his or her competences and plan their improvement.	The student will be able to indicate the differences in the structure of different types of cells, will be able to indicate the distinguishing features of cells of given types of organisms and the features common to the discussed types of cells	[SU4] test/exam - oral or written
[BIOTECHL3_K03] The graduate is willing to understand risks and dilemmas, including ethical dilemmas related to conducting scientific research and introducing advanced technologies using the achievements of biotechnology; understand and appreciate the importance of intellectual property; behave ethically.	The student will become familiar with the legal regulations related to working with a biological agent, learn the basic techniques and research tools used in cell biology to observe and analyze the functioning of cells and their components	[SK4] test/exam - oral or written
[BIOTECHL3_W08] The graduate knows the principles of occupational health and safety, understands the risks associated with laboratory work, including infectious materials, GMOs and GMMs, and knows the legal regulations relating to these areas.	The student will become familiar with the legal regulations related to working with a biological agent, learn the basic techniques and research tools used in cell biology to observe and analyze the functioning of cells and their components	[SW4] test/exam - oral or written

Subject contents

M1. Prokaryotic cell Working with microorganisms. Biosafety classes. - Observation of cells - microscopy - Culture of microorganisms and population dynamics - Labeling of prokaryotic cells. M2. Animal eukaryotic cell Animal eukaryotic cell methodology: cell culture, types of microscopy, fractionation, flow cytometry, immunoprecipitation, immunolocalization, DNA labeling, karyotyping, proliferation assays, colorimetric assaysM3. Plant eukaryotic cell Interaction of organelles in the plant cell. - Origin and evolution of the plant cell. - Secondary metabolites. - Protoplasts/fusions. - Types of plant cell culture in vitro.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Part M1	0.0%	25.0%
Part M2	0.0%	50.0%
Part M3	0.0%	25.0%
