

Subject card

Subject name and code	Environmental change reconstructions (Lecture), PG_00196128						
Field of study	Physical geography and geoinformation						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Master's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	academic	Assessment form			exam		
Conducting unit	Laboratory of Geomorphological Reconstructions -> Department of Geomorphology and Quaternary Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Piotr Woźniak				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		43.0	75
Subject objectives	<p>1. Presentation of the main methods used in palaeoenvironmental reconstructions.</p> <p>2. Explanation of the mechanisms conditioning long-term environmental changes.</p> <p>3. Presentation of indicator features of selected sedimentary environments.</p> <p>4. Presentation of the role of research on the past of the environment in the context of its current and future changes.</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GFGMU2_W02] knows and understands to a deepened extent issues in the field of exact sciences enabling the understanding of complex processes and phenomena occurring in the Earth's natural environment, and in their interpretations consistently rely on empirical foundations, using qualitative and quantitative methods	Knows and understands the interdisciplinary approach in Earth and environmental sciences, as well as qualitative and quantitative methods used in environmental reconstructions.	[SW4] test/exam - oral or written
	[GFGMU2_U03] is able to use academic literature in the fields of physical geography and geoinformation in Polish and English, selecting it appropriately for the research objective	Can choose the literature necessary to prepare for the exam.	[SU4] test/exam - oral or written
	[GFGMU2_W08] knows and understands in a deepened extent the most important contemporary problems in the field of contemporary climate change and environmental crises on a regional and global scale, their essence, genesis and possible consequences	Knows and understands the problem of anthropogenic changes in the natural environment on a regional and global scale, their essence, genesis and possible consequences.	[SW4] test/exam - oral or written
	[GFGMU2_K01] is ready to critically assess the knowledge obtained in the field of Earth and environmental sciences, particularly physical geography and geoinformation, its completion and verification through further critical analysis of scientific literature	Can prepare for the exam by critically reading the literature.	[SK4] test/exam - oral or written
	[GFGMU2_U02] is able to precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Can properly apply terminology used in the reconstruction of sedimentary environments.	[SU4] test/exam - oral or written
	[GFGMU2_U05] is able to integrate knowledge from the discipline of Earth and environmental sciences, explaining and interpreting the interrelationships between environmental processes and phenomena in order to solve research problems in physical geography and geoinformation	Is able to integrate knowledge in the field of Earth and environmental sciences, correctly explaining and interpreting the mutual relations between processes and phenomena accompanying environmental changes at different time scales.	[SU4] test/exam - oral or written
	[GFGMU2_W01] knows and understands to a deepened extent the specificity of Earth sciences in the field of physical geography, its internal structure, research subject and main research directions, the methods applied, conceptual apparatus, as well as practical applications of scientific achievements	Knows and understands the interdisciplinary approach in Earth and environmental sciences, as well as qualitative and quantitative methods used in environmental reconstructions.	[SW4] test/exam - oral or written

Subject contents	<ol style="list-style-type: none"> 1. Natural environmental archives. 2. Methods of sediment and natural processes dating. 3. Mechanisms for controlling changes in the environment. 4. The use of abiotic indicators in environmental reconstructions. 5. The use of biotic indicators in environmental reconstructions. 6. Reconstructions of fluvial and fluvio-glacial environments. 7. Reconstructions of aeolian and periglacial environments. 8. Reconstructions of mass movements and seismic phenomena. 9. Reconstructions of the glacial environment. 10. Ice cores as a source of information about the past of the environment. 11. Oceanic and marine sediments as a source of information about the past of the environment. 12. Lake sediments as a source of information about the past of the environment. 13. Peat bogs as a source of information about the past of the environment. 14. Fossil soils as a source of information about the past of the environment. 15. Environmental reconstruction and forecasting future changes. 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam	51.0%	100.0%
Recommended reading	<p>Basic literature</p> <p>Allen P.A., 2000, Procesy kształtujące powierzchnię Ziemi. PWN, Warszawa.</p> <p>Bennet M.R., Glasser N.F., 2009, Glacial geology.
