University of Gdańsk

Subject card

Subject name and code	Contemporary climate change (Lecture), PG_00196133		
Field of study	Physical geography and geoinformation		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2026/2027
Education level	Master's studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	3.0
Learning profile	academic	Assessment form	exam
Conducting unit	Climate Research Laboratory -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Janusz Filipiak	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	0.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	2.0	43.0	75

Subject objectives

Discussion on the current state of the Earth's climate system and the magnitude of the change made in relation to the
pre-industrial period.
Identification of the role of humans in the climate system.
Showing the scale of the impact of climate change on natural and artificial systems.
Bringing the issues of adaptation and mitigation of climate change together with the identification of their basic
methods with consideration of renewable energy technologies as one of the methods of stabilizing emissions of
greenhouse gases.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GFGMU2_U05] is able to integrate knowledge from the discipline of Earth and environmental sciences, explaining and interpreting the interrelationships between environmental processes and phenomena in order to solve research problems in physical geography and geoinformation	Student can integrate knowledge from the discipline of earth and environmental sciences, correctly explaining and interpreting the interrelationships between environmental processes and phenomena related to the contemporary climate change.	[SU4] test/exam - oral or written [SU8] observation of student's independent or team work
[GFGMU2_U02] is able to precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Student can proficiently and appropriately apply the terminology of the contemporary climate change in oral statements and written works.	[SU4] test/exam - oral or written [SU8] observation of student's independent or team work
[GFGMU2_W08] knows and understands in a deepened extent the most important contemporary problems in the field of contemporary climate change and environmental crises on a regional and global scale, their essence, genesis and possible consequences	Student knows and understands the most important problems of the contemporary regional and global climate change, their nature, genesis and possible consequences.	[SW4] test/exam - oral or written
[GFGMU2_U03] is able to use academic literature in the fields of physical geography and geoinformation in Polish and English, selecting it appropriately for the research objective	Student can effectively use skillfully selected for the purpose of application scientific literature on the contemporary climate change both in Polish and English.	[SU4] test/exam - oral or written [SU8] observation of student's independent or team work
[GFGMU2_W02] knows and understands to a deepened extent issues in the field of exact sciences enabling the understanding of complex processes and phenomena occurring in the Earth's natural environment, and in their interpretations consistently relay on empirical foundations, using qualitative and quantitative methods	Student knows and understands the issues of science to understand the complex processes and phenomena occurring in relation to the contemporary climate change, and in their interpretation consistently relies on empirical foundations, using qualitative and quantitative methods.	[SW4] test/exam - oral or written
[GFGMU2_K01] is able to behave appropriately in the workplace and in everyday life by critically evaluating information received in the light of their existing knowledge, recognising the importance of knowledge in solving cognitive and practical problems, and, when faced with difficulties, drawing on expert knowledge	Student is ready to critically assess his/her knowledge of the contemporary climate change, supplementing and revising it through critical reading of the literature.	[SK4] test/exam - oral or written [SK8] observation of student's independent or team work

Subject contents

1. Introduction to the problem of modern climate change, basic definitions.
2. Attribution of causes of climate variability and change.
3. Impact of climate change on natural and artificial systems.
4. Regional aspects of climate change with particular reference to Europe and the Baltic Sea basin.
5. the activities of the United Nations Framework Convention on Climate Change (UNFCCC) and the Intergovernmental Panel on Climate Change (IPCC).
6. Climate change adaptation and mitigation, basic definitions.
7. CO2 emission budget.
8. Climate change adaptation methods general and sectoral approaches.
9. Adaptation of cities.
10. Climate change and energy - considerations for the development of renewable energy sources.
11. Geoengineering.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
obtaining a passing grade on the written test	51.0%	100.0%

Recommended reading	Basic literature	IPCC, 2023: Climate Change 2023: Synthesis Report.
