

Subject card

Subject name and code	Coastal zone dynamics (Lecture), PG_00196135						
Field of study	Physical geography and geoinformation						
Date of commencement of studies	October 2026		Academic year of realisation of subject			2026/2027	
Education level	Master's studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	full-time studies		Mode of delivery			at the university	
Year of study	1		Language of instruction			Polish	
Semester of study	2		ECTS credits			2.0	
Learning profile	academic		Assessment form			exam	
Conducting unit	Laboratory of Geomorphological Reconstructions -> Department of Geomorphology and Quaternary Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Patryk Sitkiewicz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		34.0	50
Subject objectives	<ol style="list-style-type: none"> 1. Presentation of the hydrodynamic and geological conditions of the variability of the coastal zone 2. Familiarization with geomorphological processes occurring in the coastal zone 3. Determining the role of human activity in shaping the dynamics of the coastal zone 4. Presentation of natural hazards occurring in the coastal zone 						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GFGMU2_U03] is able to use academic literature in the fields of physical geography and geoinformation in Polish and English, selecting it appropriately for the research objective	Can effectively use scientific literature in research on the coastal zone of seas and oceans, both in Polish and English.	[SU4] test/exam - oral or written
	[GFGMU2_W08] knows and understands in a deepened extent the most important contemporary problems in the field of contemporary climate change and environmental crises on a regional and global scale, their essence, genesis and possible consequences	Knows and understands the processes occurring in the coastal zone of seas and oceans at various spatial scales, as well as their essence, genesis, and possible consequences.	[SW4] test/exam - oral or written
	[GFGMU2_K01] is ready to critically assess the knowledge obtained in the field of Earth and environmental sciences, particularly physical geography and geoinformation, its completion and verification through further critical analysis of scientific literature	The student is ready to critically assess his knowledge of coastal geomorphology, supplement it, and verify it by critically reading the literature on the subject.	[SK4] test/exam - oral or written
	[GFGMU2_U02] is able to precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Can fluently and appropriately use terminology related to processes and forms occurring in the coastal zone in written work.	[SU4] test/exam - oral or written
	[GFGMU2_U05] is able to integrate knowledge from the discipline of Earth and environmental sciences, explaining and interpreting the interrelationships between environmental processes and phenomena in order to solve research problems in physical geography and geoinformation	Can integrate knowledge in the field of coastal sciences, correctly explaining and interpreting the mutual relations between processes and phenomena occurring in the coastal zone of seas and oceans.	[SU4] test/exam - oral or written
	[GFGMU2_W03] knows and understands in a deepened extent issues in the theory of geographic information systems, basics of organization and operation of spatial information infrastructures and possibilities of using geoinformatics tools in physical geography	Knows how geographic information systems are used in coastal research.	[SW4] test/exam - oral or written
	[GFGMU2_W01] knows and understands to a deepened extent the specificity of Earth sciences in the field of physical geography, its internal structure, research subject and main research directions, the methods applied, conceptual apparatus, as well as practical applications of scientific achievements	Knows and understands the subject of research, the main research directions, the conceptual apparatus of coastal geomorphology, and the practical applications of scientific research in this field.	[SW4] test/exam - oral or written
Subject contents	<ol style="list-style-type: none"> 1. Coastal zone basic definitions, boundaries, and internal divisions 2. Time-spatial scales of coastal zone morphodynamics 3. Basics of hydrodynamics 4. Landforms of shore and seafloor 5. Methods for assessing the state and changes in shore and nearshore seabed 6. Coastal protection methods 7. Human impact on the coastal zone dynamics 8. Basics of Integrated Coastal Zone Management 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	examination	50.0%	100.0%
