Subject name and code	Biochemical structure of proteins, PG_00196908						
Field of study	Biotechnology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	academic	Assessment form			credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Szymon Ziętkiewicz

Subject objectives	To learn advanced concepts of protein structure, introduce the issues related to protein structural research, and analyse the structure-function relationship. Gaining advanced knowledge about the mechanisms of protein functioning at the molecular level, the interactions that determine the folding process, application of experimental and computational methods for determining protein structures. The student will learn how to interpret structural data, become familiar with the potential problems and limitations of the methods used and with the ongoing development of research techniques.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[BIOTECHL3_W07] The graduate has advanced knowledge of the rules of operation and the possibilities of using research techniques and tools used in biotechnology.		Student knows the physical principles of the methods of structural biology (crystallography, NMR, cryo-EM), knows their limitations and quality criteria		[SW4] test/exam - oral or written		
	[BIOTECHL3_W01] The graduate possesses structured and advanced knowledge of biological phenomena at the molecular level and understands their importance for biotechnology.		The student is familiar with the physical interactions involved in the formation of protein structures, knows the aspects of the secondary, tertiary and quaternary structure and understands the structure-function relationship of proteins		[SW4] test/exam - oral or written		
	[BIOTECHL3_K01] The graduate is aware of the scope of their own knowledge and skills; demonstrates a willingness to continuously update them and pursue professional development.		Student is aware of the progress in methodology and knowledge in structural biology and necessity of constant actualization of his/her own knowledge		[SK3] text preparation/written work		

Subject contents	<p>1. Structural aspects in biochemistry, protein conformation, conformational space, Anfinsen paradox</p> <p>2. Protein amino acids, peptide bond, physico-chemical basis of interactions involved in creation and stabilization of protein structurebiałkowych.</p> <p>3. Structure levels, dynamics and thermodynamics of protein folding</p> <p>4. Empirical and computational methods for protein structure determination</p> <p>5. Structural elements of proteins, helices, sheets, structural motives, domains E</p> <p>6. Dynamics of proteins, conformational changes</p> <p>7. Discussion of chosen examples of protein mechanisms and structure-function relationships</p>
