

Subject card

Subject name and code	Biotechnology in medicine - The human organism - homeostasis and the pathological state - Methodology (M05_B1), PG_00196942						
Field of study	Biotechnology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2028/2029		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Intercollegiate Faculty of Biotechnology UG-MUG -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Grzegorz Stasiłojć				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	2.0	0.0	56.0	0.0	4.0	62
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	62		5.0		33.0	100
Subject objectives	By fusing practical laboratory skills with histology, cytology, and toxicological knowledge, Block 1-Methodology aims to educate students for advanced cellular studies, including evaluating the effects of external influences on human health.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BIOTECHL3_W09] The graduate possesses structured and advanced knowledge of the terminology and concepts used in biological and medical sciences and related disciplines.	The student is able to use specialized terminology.	[SW1] oral statement/ conversation/discussion [SW2] presentation/project/paper/ report [SW3] text preparation/written work
	[BIOTECHL3_W04] The graduate has an advanced level of knowledge on the structure and functions of the human body in terms of anatomy, histology and physiology and understands their importance for medicine and medical biotechnology.	The student is able to characterize the microscopic and macroscopic structure of the main organs and systems of man, linking their structure to their functions. The student understands the basic physiological mechanisms underlying the functioning of the human organism at the cellular, tissue and organ levels. The student is able to explain the relationship between structure and function at different levels of organization of the organism.	[SW4] test/exam - oral or written [SW3] text preparation/written work
	[BIOTECHL3_U08] The graduate is able to learn independently and in a targeted manner, develop his or her competences and plan their improvement.	The student is able to study independently from the indicated materials including scripts and presentations. The student is able to take notes to reproduce the experiments performed. The student is able to conduct a review of the scientific literature in Polish and English, and then synthesize the information obtained in a coherent and logical manner.	[SU1] oral statement/conversation/ discussion [SU2] presentation/project/paper/ report [SU3] text preparation/written work
	[BIOTECHL3_U06] The graduate is able to prepare a targeted written study in Polish and/or English, covering detailed issues in the field of biotechnology, using scientific language, including specialist terminology and conceptual apparatus appropriate for biotechnology	The student is able to prepare a detailed report on the ecotoxicological risk assessment of a selected chemical substance, taking into account current guidelines and standards. The student is able to correctly apply specialized ecotoxicological terminology in the prepared study. The student is able to present the results of his analysis in a clear and comprehensible manner for an audience of varying levels of sophistication.	[SU1] oral statement/conversation/ discussion [SU2] presentation/project/paper/ report [SU8] observation of student's independent or team work
	[BIOTECHL3_U01] The graduate possesses practical skills in performing laboratory procedures, documenting results, and applying techniques necessary in biotechnology, including methods of isolation, modification, selection, and analysis of organisms, tissues, cells, and molecules; has the ability to operate advanced laboratory.	The student/graduate is able to independently perform laboratory experiments related to animal cell culture. The student/graduate interprets the obtained results and draws conclusions from them, and documents his/her work clearly and accurately. The student(s) will recognize tissues and organs on the basis of analysis of histological preparations. The student(s) will work safely in the laboratory and follow the applicable standards. The student will be able to work independently and in a team. The student will be able to plan and organize his/her work. The student will be able to analyze test results and draw conclusions from them.	[SU1] oral statement/conversation/ discussion [SU3] text preparation/written work [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[BIOTECHL3_W07] The graduate has advanced knowledge of the rules of operation and the possibilities of using research techniques and tools used in biotechnology.	Student know the methodology related to the analysis of the cell in the pathological state and the related specific conceptual apparatus and terminology.	[SW4] test/exam - oral or written [SW3] text preparation/written work

	<table border="1"> <thead> <tr> <th>Course outcome</th> <th>Subject outcome</th> <th>Method of verification</th> </tr> </thead> <tbody> <tr> <td>[BIOTECHL3_K04] The graduate is aware of the importance of occupational safety rules, is able to apply them and react in hazardous situations, ensuring their own safety and the safety of others.</td> <td>The student is aware of the importance of safety rules, possible risks and responsibility for the safety of others. Student knows the rules of working in laboratories with different levels of BSL and understands the risks associated with the various levels of biosafety.</td> <td>[SK3] text preparation/written work [SK5] implementation of a problem task</td> </tr> </tbody> </table>	Course outcome	Subject outcome	Method of verification	[BIOTECHL3_K04] The graduate is aware of the importance of occupational safety rules, is able to apply them and react in hazardous situations, ensuring their own safety and the safety of others.	The student is aware of the importance of safety rules, possible risks and responsibility for the safety of others. Student knows the rules of working in laboratories with different levels of BSL and understands the risks associated with the various levels of biosafety. Subject contents	<ul style="list-style-type: none"> • Methodology 1 - Proseminar. Methods of analyzing a cell in a pathological state • Methodology 2- Seminar. Prospective ecotoxicological risk assessment of a chemical compound • Methodology 3 - Laboratory classes (Histology) • Analysis of the structure and function of human organs and their systems: histological analysis of human organs forming systems: cardiovascular, respiratory, digestive including accessory organs, endocrine, urinary, nervous including organs of sight, hearing and balance, and Reproductive organs and skin with its appendages; linking structure to function • Methodology 4 - Laboratory classes in animal cell culture. • Safety signs and labeling of hazardous substances. • Principles of aseptic work. • The ability to properly and safely operate equipment. • Passage of cells (suspension, adherent) and induction of death. • Counting and viability assessment. Freezing and thawing of cells Identification of infection by Mycoplasma. • Proliferation assay. Cell cycle analysis. Hemolytic test. Analysis of membrane proteins by flow cytometry and Fluorescence microscopy. • Characterization of cell morphology 												
Prerequisites and co-requisites													
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th> <th>Passing threshold</th> <th>Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>M1 + M2 - Methods of analyzing a cell in a pathological state + Prospective ecotoxicological risk assessment of a chemical compound</td> <td>51.0%</td> <td>9.0%</td> </tr> <tr> <td>M3 - practical classes in detailed Histology</td> <td>51.0%</td> <td>50.0%</td> </tr> <tr> <td>M4 - practical classes in animal cell culture</td> <td>51.0%</td> <td>41.0%</td> </tr> </tbody> </table>	Subject passing criteria	Passing threshold	Percentage of the final grade	M1 + M2 - Methods of analyzing a cell in a pathological state + Prospective ecotoxicological risk assessment of a chemical compound	51.0%	9.0%	M3 - practical classes in detailed Histology	51.0%	50.0%	M4 - practical classes in animal cell culture	51.0%	41.0%
Subject passing criteria	Passing threshold	Percentage of the final grade											
M1 + M2 - Methods of analyzing a cell in a pathological state + Prospective ecotoxicological risk assessment of a chemical compound	51.0%	9.0%											
M3 - practical classes in detailed Histology	51.0%	50.0%											
M4 - practical classes in animal cell culture	51.0%	41.0%
