2. To learn practical skills for planning, implementing and controlling projects in different types of enterprises.
3. Developing competence in project team management, communication and negotiation.
4. Preparing to effectively use modern tools and technologies to support project management.
5. Understand the importance of project management in the strategic and operational context of the company.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[EKONMU2_K01] recognises the importance of knowledge in the field of economics in the process of identifying and solving economic problems and of consulting experts when having difficulties in solving them independently	The student recognizes and understands the critical importance of economic knowledge in identifying economic problems, especially in the context of project implementation in an enterprise. The student is able to integrate economic knowledge with project management methods and tools, which allows for more effective planning, implementation and control of projects. The student recognizes the need to consult with experts when encountering difficulties in solving complex economic problems related to a project on their own, which shows an understanding of their own limitations and the value of expertise.	[SK1] oral statement/conversation/ discussion [SK2] presentation/project/paper/ report [SK5] implementation of a problem task
[EKONMU2_U07] can independently propose solutions to complex economic or social problems, select methods of analysis and conduct conclusive procedures in this respect	The student is able to perform conclusive procedures such as risk analysis, stakeholder analysis, scheduling and resource allocation, which are key to effective project management	[SU2] presentation/project/paper/ report
[EKONMU2_W07] has an in-depth knowledge of economic and financial principles governing the functioning and management of economic entities and organisations, as well as of systems of legal, organisational, professional, moral and ethical norms and rules organising public structures and institutions, both in the national and international spheres	The student is able to effectively plan and carry out an individual or group project concerning the functioning of an enterprise, taking into account economic and financial principles, legal norms, and ethical rules. The project is discussed and approved during consultations with the course instructor and subsequently presented in class.	[SW1] oral statement/ conversation/discussion [SW2] presentation/project/paper/ report

Subject contents

1. Introduction to project management.
2. The role and importance of projects in an organization. Objectives of projects. Case analysis
3. Initiating and defining a project. Constructing the business case. Feasibility and feasibility studies.
