

Subject card

Subject name and code	Hydrobiology - laboratory, PG_00199790						
Field of study	Oceanography						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Department of Marine Biology and Biotechnology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Justyna Kobos				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	To learn about the ecological characteristics of the aquatic environment, the functioning of inland and marine ecosystems, and how various organisms adapt to life in the aquatic environment.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANL3-U03] is able to analytically and synthetically compile research and analysis results and, based on them, draw correct conclusions	is able to analytically and synthetically develop the results of hydrobiological research and draw correct conclusions based on them	[SU2] presentation/project/paper/report
	[OCEANL3-K05] is willing to take responsibility for the safety of his/her own and others' work, is aware of the risks and threats resulting from the work performed	is aware of the risks and dangers arising from the work of a hydrobiologist	[SK2] presentation/project/paper/report
	[OCEANL3-U03] is able to process, describe, and present results, and draw conclusions	is able to develop, describe and present results based on hydrobiological research	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[OCEANL3-W02] has a broad knowledge and understanding of physical, biological, chemical, and geological processes and phenomena occurring in aquatic environments, with particular emphasis on the marine environment	knows and understands a wide range of chemical, physical, biological and geological processes and phenomena affecting aquatic organisms	[SW4] test/exam - oral or written
[OCEANL3-W01] has an advanced knowledge and understanding of the terminology used in oceanography and related exact and natural sciences (in Polish and a selected foreign language)	knows and understands the terminology used in hydrobiology at an advanced level	[SW4] test/exam - oral or written	
Subject contents	<p>Topics of exercises:</p> <ol style="list-style-type: none"> 1. to learn about the properties of the aquatic environment, i.e. the physico-chemical, edaphic and biotic parameters of fresh and marine waters, which have a major impact on the occurrence and biology of the organisms living there. 2. to introduce different types of water - river, lake and sea. 3. to learn about plant and animal organisms living in different aquatic ecosystems - saline, brackish and fresh. 4. to learn about the interrelationships and interconnections of these organisms with the environment, using selected examples. 5. to discuss the problems of modern hydrobiology - including drought, eutrophication, acidification. 6. Interpretation of data presented in environmental reports 7. Learning the methods of collecting, preserving and storing selected samples during field work by hydrobiologists 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	presentations	51.0%	20.0%
	tests	51.0%	60.0%
	worksheet	51.0%	20.0%
Recommended reading	Basic literature	<p>Pliński M., 1992, Hydrobiologia ogólna, wyd. Uniwersytet Gdański (i wydania późniejsze) (in Polish)</p> <p>Górnjak A., Kajak Z., 2019, Hydrobiologia - Limnologia, wyd. PWN (in Polish)</p> <p>Odum E., 1982, Podstawy ekologii, PWRiL, Warszawa (in Polish)</p>
