

Subject card

Subject name and code	Navigation II - classes, PG_00200490						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2027/2028		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			0.0		
Learning profile	practical	Assessment form			credit		
Conducting unit	Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Arkadiusz Narloch				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	7.0	0.0	0.0	0.0	7
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	7		1.0		4.0	12
Subject objectives	<p>Mastering skills in the following areas:</p> <p>navigation (based on the framework training program at the operational level in the deck department in coastal shipping), selected elements of nautical science, and issues related to sea levels and tides for class B hydrographers (based on the framework training program for class B marine hydrographers).</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[HML3-U11] is able to use navigation devices, means of technical observation and communication as well as measuring instruments, as well as apply in practice various techniques of measurement and observation in the field of professional activity related to the field of study	is able to: - effectively plan a ship's voyage - navigate safely in coastal waters	[SU4] test/exam - oral or written
	[HML3-U14] is able to use the applicable terminology in presenting and discussing problems related to the field of study	is able to: - define and verify potential navigational hazards - use nautical publications - obtain navigational and weather warnings - correct nautical charts and publications - obtain navigational and weather warnings - correct maps and nautical publications - determine the position of a ship using terrestrial and electronic methods - navigate safely - determine and calculate compass corrections - plan a ship's voyage - perform navigational calculations regarding the course and route of the ship, including ECDIS	[SU4] test/exam - oral or written
Subject contents	2. GEODETIC AND CARTOGRAPHIC BASICS OF NAVIGATION Using navigation charts: navigational hazards on nautical charts, navigational aids, the IALA navigational aid system.		
Prerequisites and co-requisites	This subject is required by the Regulation of the Minister of Infrastructure and Development of 5 February 2014 on framework training programs and examination requirements for deck department seafarers (consolidated text: Journal of Laws of 2023, item 1566): attendance at all classes is mandatory. The Polish Naval Academy allows students to make up up to 20% of excused absences from these classes in a form that allows them to acquire missing knowledge and skills. Students who have passed the course but, due to absences exceeding 20% of classes or who did not make up the classes in a form that allows them to acquire missing knowledge and skills, will not receive an entry in the supplement confirming completion of studies recognized at the operational level in coastal navigation.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	51.0%	100.0%

<p>Example issues/ example questions/ tasks being completed</p>	<ol style="list-style-type: none"> 1. Determining the calculated position taking into account drift. 2. Determining the calculated position taking into account drift. 3. Determining the calculated position taking into account total drift. 4. Determining the observed position from the measurement of navigation parameters to one, two, and three navigation marks. 5. Using tide tables and calculating the time of occurrence of the desired tide height.
