

Subject card

Subject name and code	Selected Topics in Sea Dynamics - laboratory classes , PG_00201147						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2028/2029		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to practical vocational preparation		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			1.0		
Learning profile	practical	Assessment form			credit		
Conducting unit	Laboratory of Physical Oceanography -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Witold Cieślíkiewicz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		9.0	26
Subject objectives	<p>To introduce students to the phenomena of sea waves, sea currents - an in-depth discussion of selected issues.</p> <p>To explain to students selected elements of marine dynamics in analytical terms.</p> <p>To prepare students for the practical application of basic issues related to modern marine dynamics.</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[HML3-W01] knows and understands, at an advanced level, selected facts, phenomena and processes, as well as methods and theories concerning them, explaining the complex relationships between them, constituting basic general knowledge in the field of scientific disciplines forming the theoretical foundations specific to the field of study	knows and understands, at an advanced level, marine hydrodynamics and its mathematical description; its connection to the laws of physics and its relationship to natural processes; knows and understands the theoretical foundations of other scientific fields necessary for formulating and solving typical problems related to marine dynamics	[SW1] oral statement/ conversation/discussion
	[HML3-W02] knows and understands, at an advanced level, selected phenomena and processes occurring in the hydrosphere, atmosphere, lithosphere and biosphere, their interconnections and relations, as well as practical applications of this knowledge in professional activities related to the field of study	knows and understands, at an advanced level, the phenomena and processes occurring in the hydrosphere and atmosphere, as well as their interrelationships	[SW1] oral statement/ conversation/discussion
	[HML3-U08] is able to independently use the professional literature available in traditional and electronic form, make an assessment, critical analysis and synthesis as well as the correct interpretation of the information obtained	is able to independently use professional literature and the Internet; is able to synthesize, evaluate, and correctly interpret the information obtained, and, based on this information, draw conclusions, form opinions, and take action	[SU1] oral statement/conversation/ discussion
	[HML3-U14] is able to use the applicable terminology in presenting and discussing problems related to the field of study	is able to use current scientific terminology when presenting and discussing issues related to ocean dynamics	[SU1] oral statement/conversation/ discussion
[HML3-U19] is able to plan and implement independent learning and improvement of his/her professional competences	is able to plan and organise independent learning and improvement of their professional and personal competences, including language competences	[SU1] oral statement/conversation/ discussion	
Subject contents	Exercises: Calculus tasks to consolidate the material presented in lectures: basic equations of fluid mechanics, vorticity and circulation, description of wave motion. Problem tasks complementing the material presented in lectures.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	activity in the class	51.0%	100.0%
Recommended reading	Basic literature	MASSEL S. R.: Procesy hydrodynamiczne w ekosystemach morskich. Wyd. UG, Gdańsk 2010. (in Polish)
