University of Gdańsk

Subject card

Subject name and code	Coastal zone dynamics (Laboratory classes), PG_00201201		
Field of study	Physical geography and geoinformation		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2026/2027
Education level	Master's studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	academic	Assessment form	credit
Conducting unit	Laboratory of Geomorphological Reconstructions -> Department of Geomorphology and Quaternary Geology -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Patryk Sitkiewicz	
	Teachers		

Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	15	2.0	33.0	50

Subject objectives

1. Presentation of the hydrodynamic and geological conditions of the variability of the coastal zone

2. Familiarization with geomorphological processes occurring in the coastal zone

3. Determining the role of human activity in shaping the dynamics of the coastal zone

4. Presentation of natural hazards occurring in the coastal zone

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GFGMU2_W02] knows and understands to a deepened extent issues in the field of exact sciences enabling the understanding of complex processes and phenomena occurring in the Earth's natural environment, and in their interpretations consistently relay on empirical foundations, using qualitative and quantitative methods	Knows the physical basis of dynamic processes, and their interpretation is consistently based on empirical foundations using qualitative and quantitative methods.	[SW3] text preparation/written work
[GFGMU2_U03] is able to use academic literature in the fields of physical geography and geoinformation in Polish and English, selecting it appropriately for the research objective	Can effectively use scientific literature in research on the coastal zone of seas and oceans, both in Polish and English.	[SU3] text preparation/written work
[GFGMU2_W08] knows and understands in a deepened extent the most important contemporary problems in the field of contemporary climate change and environmental crises on a regional and global scale, their essence, genesis and possible consequences	Knows and understands the processes occurring in the coastal zone of seas and oceans at various spatial scales, as well as their essence, genesis, and possible consequences.	[SW1] oral statement/ conversation/discussion [SW3] text preparation/written work
[GFGMU2_K01] is ready to critically assess the knowledge obtained in the field of Earth and environmental sciences, particularly physical geography and geoinformation, its completion and verification through further critical analysis of scientific literature	The student is ready to assess his knowledge of coastal geomorphology critically, supplement it, and verify it by critically reading the literature on the subject.	[SK1] oral statement/conversation/ discussion [SK3] text preparation/written work
[GFGMU2_U02] is able to precisely and appropriately use terminology in the field of physical geography and geoinformation in oral statements and written works	Can fluently and appropriately use terminology related to processes and forms occurring in the coastal zone in written work.	[SU1] oral statement/conversation/ discussion [SU3] text preparation/written work
[GFGMU2_U05] is able to integrate knowledge from the discipline of Earth and environmental sciences, explaining and interpreting the interrelationships between environmental processes and phenomena in order to solve research problems in physical geography and geoinformation	Can integrate knowledge in the field of coastal sciences, correctly explaining and interpreting the mutual relations between processes and phenomena occurring in the coastal zone of seas and oceans.	[SU1] oral statement/conversation/ discussion [SU3] text preparation/written work
[GFGMU2_W01] knows and understands to a deepened extent the specificity of Earth sciences in the field of physical geography, its internal structure, research subject and main research directions, the methods applied, conceptual apparatus, as well as practical applications of scientific achievements	Knows and understands the subject of research, the main research directions, the conceptual apparatus of coastal geomorphology, and the practical applications of scientific research in this field.	[SW3] text preparation/written work

Subject contents

1. Current and future problems related to the management of the coastal zone.
2. Intentional and unintentional human impact on the coastal morphodynamics.
3. Selected examples of investments located in coastal zones.
4. Natural hazards in coastal zones.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
activity in classes	51.0%	10.0%
presentation	51.0%	30.0%
dissertation	51.0%	60.0%
