

**Subject card**

<b>Subject name and code</b>	GIS - laboratory, PG_00201710						
<b>Field of study</b>	Oceanography						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2026/2027		
<b>Education level</b>	Master's studies	<b>Subject group</b>			Obligatory subject group in the field of study Optional subject group		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	1	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	2	<b>ECTS credits</b>			2.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			credit		
<b>Conducting unit</b>	Geographic Information System (GIS) Laboratory -> Faculty of Oceanography and Geography -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		mgr Zbigniew Trusewicz				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	30		2.0		18.0	50
<b>Subject objectives</b>	Utilization of Geographic Information Systems (GIS) in oceanography for processing, visualization, and analysis of spatial data with a particular focus on environmental issues.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-U06] is able to use specialized computer software as well as advanced mathematical and statistical methods to analyze data and describe processes and phenomena occurring in the marine and coastal environment; evaluates their reliability and usefulness and performs critical analysis	The student is able to use specialized GIS software and mathematical and statistical methods to analyze spatial data concerning phenomena and processes occurring in the natural environment. Contents: B.1-B.9.	[SU4] test/exam - oral or written
	[OCEANMU2-U05] is able to use source information in Polish and a chosen foreign language, including archival and electronic databases, within the field of oceanography; critically analyzes and synthesizes information, and is capable of performing critical interpretation and synthesis of data	The student can utilize information from various sources, such as literature and electronic databases. Contents: B.1-B.9.	[SU5] implementation of a problem task
	[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	The student is able to analytically and synthetically process research results and spatial analyses using GIS. Contents: B.1-B.9.	[SU4] test/exam - oral or written
	[OCEANMU2-W05] knows and understands the principles of planning and conducting field and laboratory research as well as advanced methods and tools of scientific research, especially in the field of the studied specialty	The student knows and understands advanced techniques, research methods, and geoinformatics tools used in oceanography to describe and interpret phenomena and processes occurring in the aquatic environment, relevant to their field of study. Contents: B.1-B.9.	[SW4] test/exam - oral or written
[OCEANMU2-K03] is ready to effectively organize his/her own work, is active and persistent and punctuality in completing tasks, is ready to carrying out evaluation of their own activities	The student is prepared for effective self-organization of their work, demonstrates activity, persistence, and punctuality in task completion, is self-critical, and draws conclusions based on self-analysis. Contents: B.1-B.9.	[SK5] implementation of a problem task	
Subject contents	<p>B1. Advanced symbolization techniques including labeling procedures.  B2. Data processing in the context of modifying cartographic projections.  B3. Concept and creation of geodatabases.  B4. Remote sensing methods for environmental monitoring.  B5. Using DEM and DSM to identify areas meeting selected input criteria - "case study."  B6. Application of interpolation techniques for mapping based on point data.  B7. 2D and 3D modeling of geospatial data.  B8. Vector modeling using geospatial analysis tools.  B9. Raster modeling using geospatial analysis tools.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Completion of a problem-based task	51.0%	60.0%
	Test	51.0%	40.0%
