

Subject card

Subject name and code	Artificial intelligence in the art historian's workshop, PG_00203566						
Field of study	History of Art						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2027/2028		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Humanistic-social subject group		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			2.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Division of Early Modern Art -> Institute of Art History -> Faculty of History -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Hubert Baumann				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	30.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	Developing students' skills in the practical use of artificial intelligence tools in research in the field of art history and cultural heritage protection. The course teaches the use of simple models and applications to support the analysis, description, and interpretation of works of art, the creation of illustrative materials, and the organization of visual and textual data. The course also introduces basic technological and ethical issues necessary for the conscious and responsible use of AI in the humanities.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[HISTSZL3_K01] Critically evaluates his/her knowledge, demonstrates a willingness to continually expand his/her knowledge and to seek expert advice if he/she has difficulty solving a problem on his/her own	Consciously and ethically uses artificial intelligence tools, is ready to critically reflect on the results generated by these tools, consciously assesses their reliability, and recognizes the need to consult experts from various fields.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report
	[HISTSZL3_U05] Is able to retrieve information (using bibliographies, archival aids, databases, various resources available on the Internet, etc.) and critically analyse, classify, categorise and synthesise it in order to solve a problem formulated by him/herself or others	Can classify, organize, and interpret visual and textual materials using AI algorithms and synthesize their results for the purposes of their own research.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
	[HISTSZL3_W06] Knows to an advanced degree the research methods and tools of the art historian's workshop, in particular the methods of analysis and interpretation of art products of different epochs	knows the basic principles of operation and potential applications of artificial intelligence and machine learning methods in the analysis and interpretation of works of art, understanding their place in the modern art historian's toolkit.	[SW2] presentation/project/paper/report
	[HISTSZL3_U11] Is able to plan and organise his/her work effectively, independently acquiring and consolidating knowledge in a structured and systematic manner	Can plan their research work, select methods, and use AI tools in a systematic and conscious manner.	[SU2] presentation/project/paper/report
	[HISTSZL3_W08] Knows and understands the key economic, legal, ethical and other considerations of various professional activities, including the basic concepts and principles of industrial property protection and copyright law	Knows the basic concepts, methods, and tools of artificial intelligence used in art research, as well as their limitations and interpretive potential. Understands the economic, legal, and ethical aspects of using AI tools in the humanities, including issues of copyright, data ownership, and responsibility for results generated by algorithms.	[SW2] presentation/project/paper/report
[HISTSZL3_K06] Has a belief in the importance of behaving in a professional manner, reflecting on ethical issues and is willing to adhere to the principles of professional ethics	Understands the ethical aspects of using artificial intelligence tools in art research and the professional practice of an art historian, and is prepared to adhere to the principles of scientific integrity and intellectual property protection.	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report	
Subject contents	The course introduces the use of artificial intelligence in the humanities, with particular emphasis on research in art and architecture. It discusses the basic principles of contemporary AI tools and their applications in the analysis and description of works of art, the development of visual and textual materials, as well as in the digitization and interpretation of sources. The classes include examples of the practical use of technologies that support image recognition, text processing, and research processes. Participants learn to evaluate the usefulness of available tools and interpret their results, taking into account basic methodological, technological, and ethical issues.		
Prerequisites and co-requisites	Basic knowledge of art history, humanities research methodology, and basic computer skills and online information retrieval.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Attendance	80.0%	0.0%
	Final project	51.0%	100.0%
