

**Subject card**

<b>Subject name and code</b>	Equations of Mathematical Physics, PG_00182321						
<b>Field of study</b>	Physics						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>				2026/2027	
<b>Education level</b>	Master's studies	<b>Subject group</b>				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>				at the university	
<b>Year of study</b>	1	<b>Language of instruction</b>				English	
<b>Semester of study</b>	1	<b>ECTS credits</b>				5.0	
<b>Learning profile</b>	academic	<b>Assessment form</b>				credit	
<b>Conducting unit</b>	Division of Mathematical Methods of Physics -> Institute of Theoretical Physics and Astrophysics -> Faculty of Mathematics, Physics and Informatics -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr hab. Marcin Marciniak				
	<b>Teachers</b>		dr hab. Marcin Marciniak				
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	60		0.0		65.0	125
<b>Subject objectives</b>	This course describes the fundamental types of second-order linear partial differential equations (often called the equations of mathematical physics), covering their properties and methods for solving them.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[FIZMU2_U03] is able to make a critical analysis of the results of measurements, observations or theoretical calculations along with the assessment of the accuracy of the results	The student can determine approximate solutions to differential equations.	[SU5] implementation of a problem task
	[FIZMU2_U04] can find the necessary information in professional literature, both in databases and in other sources; can reconstruct the reasoning or the course of an experiment described in the literature, taking into account the assumptions and approximations made	The student can locate information regarding methods for solving differential equations in literature and online sources.	[SU2] presentation/project/paper/report
[FIZMU2_W02] has in-depth knowledge in mathematics as well as mathematical and computational methods, necessary to solve physical problems of high complexity and in-depth in the selected area of physics	<p>The student knows:</p> <p>the classification of second-order linear partial differential equations,</p> <p>the properties of hyperbolic equations, using the wave equation as an example,</p> <p>Kirchhoff's formula, the d'Alembert method, and the Fourier method for solving the string equation,</p> <p>the method for solving the equation of a semi-infinite string,</p> <p>the properties of elliptic equations, using Laplace's equation as an example,</p> <p>the Green's function method for solving the Dirichlet problem,</p> <p>the properties of parabolic equations, using the heat equation as an example,</p> <p>the Fourier transform method.</p>	[SW4] test/exam - oral or written	
Subject contents	<p>Sturm-Liouville Systems</p> <p>The classification of second-order linear partial differential equations.</p> <p>Properties of hyperbolic equations using the wave equation as an example; Kirchhoff's formula, the d'Alembert method, and the Fourier method for solving the string equation; the method for solving the equation of a semi-infinite string.</p> <p>Properties of elliptic equations using Laplace's equation as an example; the Green's function method for solving the Dirichlet problem.</p> <p>Properties of parabolic equations using the heat equation as an example; the Fourier transform method.</p>		
Prerequisites and co-requisites	Courses completed: Linear Algebra, Mathematical Analysis for Physicists, Mathematical Methods of Physics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	51.0%	30.0%
	Written exam	51.0%	70.0%
Recommended reading	Basic literature	<p>A. N. Tikhonov, A. A. Samarskii, Equations of Mathematical Physics, Dover Publications, 2011</p> <p>V. P. Pikulin, S. I. Pohozaev, Equations of Mathematical Physics. A practical course. Springer Nature, 2001</p>	
	Supplementary literature	not applicable	
	eResources addresses		

Example issues/ example questions/ tasks being completed	not applicable
Work placement	Not applicable
