

Subject card

Subject name and code	Chemistry of Suspended Particulate Matter - laboratory, PG_00206149						
Field of study	Oceanography						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2028/2029		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Chemical Oceanography and Marine Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Dorota Burska, prof. UG				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	25.0	0.0	0.0	25
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	25		2.0		23.0	50
Subject objectives	Indication of analytical methods and environmental measurements that allow quantitative and qualitative characterization of suspended solids in the aquatic environment .						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANL3-K03] is ready to exercise caution and criticism in accepting information from scientific literature, the Internet and other media relating to natural sciences	Is ready to be cautious and critical in accepting information available in scientific literature, the Internet or other sources regarding the marine environment, especially in the field of information regarding the quantity and quality of suspensions	[SK2] presentation/project/paper/report
	[OCEANL3-U03] is able to process, describe, and present results, and draw conclusions	Can develop, describe and present the results of measurements and analysis of chemical composition of suspensions obtained in experiments. Carries out Correct inference on the basis of the obtained results.	[SU2] presentation/project/paper/report [SU3] text preparation/written work
	[OCEANL3-U02] is able to independently and collaboratively conduct observations and perform measurements in the field or laboratory using appropriately selected techniques, tailored to the research problem	Can individually and in teams perform basic measurements and analyses on the quantity of marine suspensions and their chemical composition, using techniques appropriate to the problem posed, conversions	[SU4] test/exam - oral or written
	[OCEANL3-K01] is willing to plan and implement, individually or as a team, the subsequent stages of the entrusted task, is willing to take responsibility for the results of these works, effectively cooperates in the team and performs various roles in it	Is ready to take responsibility for his own work in a chemical laboratory; complies with the principles of teamwork by accepting various tasks; is responsible for jointly conducted experiments in the field of chemical suspensions and the correctness of the obtained results.	[SK2] presentation/project/paper/report
Subject contents	1. Determination of suspension concentration using the gravimetric method.2. Correction of salinity using the weighing method (preparation of a salinity curve, salt washing).3. Sorption/flocculation processes in the aquatic environment (natural and anthropogenic absorbents).4. Determination of selected components of the suspension, e.g.: mineralization (e.g. phosphorus/nitrogen/carbon in suspension), extraction (e.g. chlorophyll a) with final spectrophotometric determination.5. Chemical composition of suspensions in various sea and land areas (natural and anthropogenic suspensions, e.g. calcium carbonate, humus, plastic, soot) - analysis of archival data (cruise reports, online databases, hydrodynamic model, SatBałtyk) using the literature on the subject.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	poster/presentation	51.0%	25.0%
	Worksheet/databases	51.0%	40.0%
	Test	51.0%	35.0%
