

Subject card

Subject name and code	Experimental methods for studying chemical equilibria in aqueous solutions, PG_00050885						
Field of study	Chemical Business, Chemistry, Environmental Protection						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2027/2028		
Education level	Master's studies		Subject group		Optional subject group		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		4.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Laboratory of Physicochemistry of Coordination Complexes -> Department of General and Inorganic Chemistry -> Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Dariusz Wyrzykowski				
	Teachers		mgr Ola Grabowska				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		65.0	100
Subject objectives	presenting basic issues in solution chemistry presenting the basis of chemical calculations familiarize students with the basic and more advanced aspects of chemical equilibria in aqueous solutions familiarize students with the commonly used experimental methods and data processing						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[CHEMMU2_U02] Critically assesses the results of conducted, performed observations and theoretical calculations and discusses errors.	K_U02 critically assesses the results of conducted, performed observations and theoretical calculations and discusses errors	[SU5] implementation of a problem task
	[CHEMMU2_U01] Plans and implements chemical experiments of medium complexity.	K_U01 plans and implements chemical experiments of extended complexity	[SU5] implementation of a problem task
	[CHEMMU2_U04] Applies acquired knowledge of chemistry and related scientific disciplines.	K_U04 applies acquired knowledge of chemistry and related scientific disciplines	[SU2] presentation/project/paper/report
	[CHEMMU2_W10] Uses knowledge of the principles of operation of the basic scientific and research apparatus used in chemistry.	K_W10 uses knowledge of the principles of operation of the scientific and research apparatus used in chemistry	[SW1] oral statement/conversation/discussion [SW5] implementation of a problem task
	[CHEMMU2_W03] Demonstrates extended knowledge in the field of modern measuring techniques used in chemical analysis.	K_W03 demonstrates in-depth knowledge in the field of modern measuring techniques used in chemical analysis K_W03 applies mathematics to the extent necessary to understand, describe and model chemical processes of extended complexity	[SW2] presentation/project/paper/report [SW5] implementation of a problem task
	[CHEMMU2_W06] Applies mathematics to the extent necessary to understand, describe and model chemical processes of medium complexity.	K_W06 applies mathematics to the extent necessary to understand, describe and model chemical processes of extended complexity	[SW2] presentation/project/paper/report
Subject contents	The set of physico-chemical experiments includes 10 laboratory classes thematically related to chemical equilibria in aqueous solutions. The course is intended to familiarize students with the commonly used experimental methods, namely potentiometry and conductometry as well as an advanced method, namely isothermal titration chemistry for studying chemical equilibria, designing experiments, calculations as well as presentation of the obtained results.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lab	51.0%	100.0%
Recommended reading	Basic literature	lack

	eResources addresses	

Example issues/ example questions/ tasks being completed	1) What information can be found from species distribution diagrams? 2) In which of the following acid / base titrations, we can NOT determine the equivalence point using a visual indicator in an accurate manner? (1) strong acid / strong base (2) strong acid / weak base (3) weak acid / strong base (4) weak acid / weak base (5) none of the above 3) Consider the titrations of the pairs of aqueous acids and bases listed on the left. For which pair is the pH at the equivalence point stated incorrectly? Acid-Base Pair pH at Equivalence Point (1) $\text{HCl} + \text{NH}_3$ less than 7 (2) $\text{HNO}_3 + \text{Ca}(\text{OH})_2$ equal to 7 (3) $\text{HClO}_4 + \text{NaOH}$ equal to 7 (4) $\text{CH}_3\text{COOH} + \text{NaOH}$ less than 7 (5) $\text{CH}_3\text{COOH} + \text{KOH}$ greater than 7
